AM BEST'S MONTHLY INSURANCE MAGAZINE

Underwriting Reimagined

Black Swan Assistance

The industry looks ahead to finding long-term solutions to pandemics, and an upturn in reinsurance pricing forces buyers to rethink their strategies. Also watch for discussions in the September issue with industry thought leaders about the pandemic's impact on the industry.

Reinsurers typically take advantage of August to finalize preparations for the annual Rendez-Vous de Septembre conference in Monte Carlo. They've been making the trip for 63 years.

This year is different. Rendez-Vous is just one of a number of major industry events canceled this year due to the coronavirus pandemic. While the industry's key meetings have had to be put on hold, business carries on.

Two key issues on the industry's radar have been the pandemic and the hardening reinsurance markets.

The pandemic will rank as one of the largest insured losses in history, with many issues yet to be sorted out. Evan Greenberg, the CEO of Chubb, described the pandemic as "an unprecedented event of historic proportions," as a "peril that has no bounds" and "in a practical sense has infinite tail for the industry."

The industry has been battling pressure to retroactively cover business interruption claims when it had not collected premium and in many cases had written virus exclusions. Businesses have filed suit and the cases are now in court.

Industry leaders are seeking to take a more proactive stance and develop backstops that could help provide long-term solutions for outlier events, such as pandemics.

August is Reinsurance Awareness Month. Our reinsurance special section looks at some of the pandemic backstop initiatives in the works in the U.K., Europe and United States and we examine developments in the reinsurance market.

In "Pandemic Partnerships," *Best's Review* reports on some public-private partnership backstops and speaks with some of the key

influencers behind them. Stephen Catlin, CEO of Convex, discusses how Pandemic Re came together and the conditions he imposed on the steering group, which consists of a number of industry heavyweights. *Best's Review* also examines other initiatives in Europe and the United States.

In the property catastrophe reinsurance market rates have continued to move higher.

Even prior to the pandemic, reinsurance rates have been rising due to loss creep from major catastrophes. But those trends have continued. Kingstone, for instance, announced in July that it was scaling back its purchase of catastrophe reinsurance because of the increase in pricing.

In "A Hard Reality," *Best's Review* examines the reinsurance market conditions and looks at the ramifications for Florida as well as Louisiana Citizens and the Texas Windstorm Insurance Association.

Best's Review's life insurance feature this month takes a look at an unusual problem that has gained attention due to a breach of contract lawsuit against Transamerica Life Insurance. In "An Old and a New Problem," Best's Review examines what's known as the age 100 problem in the permanent life insurance world.

Coming up in next month's issue of *Best's Review*, look for our "An Industry Transformed" discussions. Top industry leaders will share their thoughts about the pandemic and its impact on the insurance industry in these discussions, which air on ^{AM}BestTV beginning Aug. 17.

August Is Reinsurance Awareness Month

Best's Review looks at how insurers and reinsurers are working on public-private partnerships and at reinsurance market conditions. Coverage begins on page 43.

Trending Stories from Best's Review

1. Heading Off Track

A Pennsylvania long-term care insurer is the newest member of the cohort of insurers that have been ordered into rehabilitation over the years. Improved regulations and risk-based capital standards, however, are significantly slowing down that trend. (May 2020)

2. The Rise of Runoffs

After transforming its reputation and broadening its scope, the run-off market could play an important role in the wake of COVID-19. (May 2020)

3. Without Consent

A deluge of class-action lawsuits involving the use and collection of biometric information is creating new concerns for insurers, including the potential for costly claims settlements and a new swath of directors and officers claims. (April 2020)

4. On the Way Out

With the London Interbank Offered Rate phasing out next year, insurers should welcome the flexibility alternative rates can bring to their financial decisions. (June 2020)

5. The COVID Catastrophe

The global pandemic is on track to be the costliest event in insurance history. It's also a defining moment for the industry. (June 2020)

^{*} Top Best's Review articles from April 23-June 23

LL Global Names Head Of Industry Solutions, CFO

Also, Lockton Capital Markets names CEO, Zurich names senior risk consultant for climate change, SUNZ Holdings names president, and industry veteran dies at 92.

L Global, the parent company for LIMRA, LOMA and Secure Retirement Institute, has named Mark Singleton as its new head of industry solutions and chief financial officer.

As head of LL Global's industry solutions program, Singleton will work with members to identify new ideas to help address common issues, and build and execute the go-tomarket strategies.

Mark Singleton

He also will oversee the overall operations for LL Global's conferences and meetings (both virtual and in-person), to ensure consistency and enhanced member value.

Singleton has more than 25 years of financial management, distribution and operational experience. He has held leadership roles in the financial services industry and most recently, was president and chief executive officer of 5Star Life Insurance Co., the life insurance carrier for the Armed Forces Benefit Association. In 2019, Singleton also served as board chair for the Life Insurers Council, an LL Global forum for senior-level life insurance executives, primarily from small-to-medium-sized companies.

"Mark's breadth of knowledge and proven record of building state-of-the art marketing and sales strategies will help LL Global continue its long tradition of supporting its members through costeffective, shared industry solutions and compelling convening programs," said Gina Birchall, chief operating officer, LL Global.

Zurich Insurance Group Names Senior Risk Consultant for Climate Change

Zurich Insurance
Group has named
Belinda Bates to the
newly created post of
senior risk consultant,
climate change, in
commercial insurance.

In her new role on the risk engineering team, Bates will work with Amar Rahman, global natural hazards practice leader, as

Belinda Bates

well as the underwriting teams, to develop and deploy Zurich's climate change resilience services.

Prior to joining Zurich, Bates was a consultant in financial risk management at EY for more than four years.

Global Reinsurance Forum Names Chairman and Vice Chairman

The Global Reinsurance Forum has named Emmanuel Clarke to succeed Kevin O'Donnell as chairman, and Jean-Jacques Henchoz as vice chairman.

Clarke, president and chief executive officer at PartnerRe, will be appointed for a twoyear term and replaces O'Donnell, CEO of RenaissanceRe, who

Emmanuel Clarke

became chairman in 2018. Henchoz, CEO of Hannover Re, was elected vice chairman.

The Global Reinsurance Forum is composed of 12 global reinsurers; its main objective is to promote a stable, innovative and competitive worldwide reinsurance market. The members of the GRF represent Axa XL, Gen Re, Hannover Re, Lloyd's, Mapfre Re, Munich Re, PartnerRe, RenaissanceRe, RGA, Scor, Swiss Re and Toa Re.

Lockton Capital Markets Names CEO

ockton Capital Markets has named Ken Pierce as chief executive officer.

Pierce has 30 years of experience as a leader in the insurance and alternative asset management industries. In 2019, Pierce founded and began serving as CEO of Vanpoint Advisors, which originated and structured asset portfolio financing transactions for alternative asset managers, as well as closed block reinsurance, sidecar reinsurance, and surplus notes.

On June 1, the assets of Vanpoint were merged into Lockton Capital Markets.

He also previously served as co-founder of Vanbridge, and held leadership roles at Mayer Brown, Morgan Stanley and Lehman Brothers.

SUNZ Holdings Names President

S UNZ Holdings LLC has named Rick Leonard as president of the company.

Leonard has been at SUNZ for almost 10 years, most recently as director of sales and executive vice president. He initially joined as a broker relations executive and was quickly promoted to director.

Rick Leonard

Leonard's background consists of retail broker experience, field sales, marketing, loss control, and client relations. He has more than 18 years of experience in the insurance industry.

FBL Financial Group Names Chief Investment Officer

BL Financial Group Inc. named Jeffrey A. Whitehead to succeed Charles T. Happel as chief investment officer.

Whitehead was to transition to his new role on June 15 to replace Happel, who is retiring this year. Whitehead will be a member of FBL's management team and have overall responsibility for

Jeffrey A. Whitehead

managing the company's investment policy and strategy.

Whitehead had been with Aegon USA Investment Management for the past 19 years serving as head of insurance asset management and client investment solutions.

QBE North America Names Head Of Newly Created Specialty Insurance Group

Q BE North America has named Steve Gransbury as head of its newly created specialty insurance group and Tara Krauss to succeed Gransbury as head of accident and health.

In his new role, Gransbury will lead the specialty insurance unit that consists of QBE's accident & health, aviation, and trade credit and surety practices.

Previously,
Gransbury had been leading accident & health, the largest of the three businesses.
QBE Specialty
Insurance is part of QBE North America's

Steve Gransbury

Tara Krauss

Specialty & Commercial organization. Gransbury joined QBE in 2009 when the company acquired SLG Benefits & Insurance LLC, a program management company co-founded by Gransbury. He has over 25 years of experience in the insurance, reinsurance and captive industry.

Krauss has been promoted to replace Gransbury as the leader of QBE Accident & Health. Her most recent role was senior vice president of underwriting operations for accident & health.

Krauss has more than 24 years of experience in the insurance industry. Since joining QBE in 2009, she has held several leadership roles with increasing responsibilities. Prior to joining QBE, Krauss held various underwriting positions with HCC Insurance (formerly LDG) and SLG Benefits & Insurance LLC.

Tokio Marine HCC - Credit Group Names Chairman and President

Tokio Marine HCC - Credit Group has named Mark Reynolds, currently president of Tokio Marine HCC - Credit Group, as chairman. Jerome Swinscoe, currently chief underwriting officer of the same group, will succeed Reynolds as president.

Reynolds and Swinscoe will transition to their new roles on Jan. 1. 2021.

Swinscoe joined Tokio Marine HCC - Credit Group as senior underwriter in 2007 and became chief underwriting

officer in 2017. Prior to joining Tokio Marine HCC, he was an underwriter at Catlin Group Ltd. Swinscoe began his insurance career with Marsh in France.

Industry Veteran Jack Bogardus Dies at 92

John "Jack"
Bogardus, the
former chief executive
officer and chairman
of broker Alexander &
Alexander and co-author
of Spreading the Risks:
Insuring the American
Experience, has died
from complications of
Alzheimer's disease at
the age of 92.

John "Jack" Bogardus

Bogardus spent more than 40 years in

the insurance industry. He joined Alexander & Alexander—now part of Aon Corp.—as a trainee in 1950 and spent his entire professional career with the firm. He held the positions of vice president, executive vice president, president and chief operating officer, president and CEO, chairman and CEO, chairman of the board, and director, according to the Insurance Risk Management Institute.

Bogardus enlisted in the Navy toward the close of World War II, where he served on the USS Brown. Some years later, during the Korean conflict, he was a commissioned officer and served on the USS Roanoke based out of Norfolk, Virginia, according to his obituary.

Bogardus was the author of articles in various professional journals and co-author with Robert Moore of *Spreading the Risks: Insuring the American Experience* in 2003, according to IRMI.

He served as a director of the Insurance Brokers Association of New York and a director and chairman of the governing committee of the National Association of Insurance Brokers. He was also a member of the U.S. Chamber of Commerce Insurance Committee, and a board member of the American Institute for Chartered Property Casualty Underwriters and of the Insurance Institute of America.

Bogardus is survived by his wife of 70 years, Lela, and four children; six grandchildren and two great grandchildren, according to his obituary.

BR

Clarification:

In the July issue, in the article "Making the Jump," Prudential Financial corrected previously provided information including: the name of its term life product to SimplyTerm and also said that in some cases it can issue new policies at times in just one day.

Brand-Building

Nationwide scores a new sponsorship agreement with a professional soccer club and an industry expert offers tips for building a personal brand.

Goal!

NATIONWIDE is

teaming up with American professional soccer club Columbus Crew SC in a new multiyear sponsorship agreement that will make the Columbus, Ohio-based insurer the Official Columbus Crew SC Jersey Partner beginning next year.

This year, the Crew, a member of Major League Soccer's Eastern Conference, is partnering with Nationwide Children's Hospital and featuring a special Nationwide Children's jersey for competitions.

Beginning in 2021, Crew SC kits will feature the iconic Nationwide logo, and Nationwide Children's Hospital

SCORE: Columbus Crew SC players, from left, Gyasi Zardes, Jonathan Mensah and Lucas Zelarayan, wear their new jerseys featuring Nationwide and Nationwide Children's Hospital logos.

will transition into a community partner role with the team.

Jim McCoy, vice president of sponsorships, meetings and events at Nationwide, said the company's partnership with the Crew is a "natural fit" and ties into its mission of "helping and taking care of businesses, individuals and communities in which we live and work."

It does that by helping Nationwide meet its core objectives of building a national brand, driving business, creating partnerships and developing a strong philanthropic tie to the community, he said.

Tips for Building a Personal Brand

Personal branding allows individuals to not only promote themselves but to also distinguish themselves from others and build trust with prospective clients and employers. Following are some key steps to take to create a successful personal brand.

Learning. Someone once said something that's stuck with me for years: "If you're comfortable, you'll become stagnant." To build competencies and experience, which ultimately contribute to building your personal brand, it's important to allow yourself to be uncomfortable and test new things. Always look for something you learned from an experience in order to grow.

Networking. Now more than ever, we are being

Kate O'Toole is the operations project manager for Starkweather & Shepley Insurance Brokerage Inc. and an incoming member of the board of Network of Vertafore Users (NetVU).

challenged to adapt to new ways of thinking and doing. However, we can't do it alone. Each person adds value as we aspire to a greater good, and that's the purpose behind networking, education, technology and agency management system user groups. When building a personal brand, it's not about one person trying to lead the charge. Instead, it's about getting people together to share their experiences, solve problems and create winning solutions. If you're holding it all to yourself, no one wins.

Serving. Serving on committees and boards and teaching courses boosts professional development. It's like a shot of adrenaline. It's important to always look for new projects, to take on new ways to train your peers and to hopefully achieve the results you're looking for. People are a vital component of your personal brand-building effort.

Lori Chordas is a senior associate editor. She can be reached at *lori.chordas@ambest.com*.

An Industry Transformed

Watch for our series of discussions with top industry leaders about the pandemic and its impact on the insurance industry. These discussions will air on AMBestTV beginning on August 17. They will be presented in the September issue of Best's Review.

Digitally Native, Not by Choice: August 17

With little advance warning, insurers have been forced to operate, distribute and respond in an all-digital environment. Those lessons are reshaping operations, sales, product delivery and customer interactions.

Panelists

Bill Pieroni	Sean Ringstead	Tanguy Catlin	Kate Smith
ACORD	Chubb	McKinsey	AM Best (moderator)

Innovation Now: August 18

Changed personal and business environments demand new products and services. Insurers are finding ways to rapidly create and deploy new coverages, and regulators are exploring new approaches to encourage those innovations.

Panelists

Matt Mosher	Michael Pieciak	Matt Josefowicz	Hank Watson	John Weber
AM Best Rating Services	Insurance Commissioner Vermont	Novarica	Lloyd's	AM Best (moderator)

Defending Relevancy: August 19

Legal and legislative attempts to force insurers to cover non-contractual business interruption claims have become a key concern for the industry. While insurers routinely exclude coverage for a range of catastrophic risks and outlier events, the downside is an industry that erodes its position as an essential economic backstop. Some in the industry are finding new ways to cover previously shunned risks.

Panelists

Bob Hartwig	Neil Sprackling	Pina Albo	Suki Basi	Meg Green
University of South Carolina	Swiss Re	Hamilton	Russell Group	AM Best (moderator)

Reaching Beyond the Industry: August 20

Some risks are beyond the scope of private insurers. Risks such as earthquake, hurricanes and terrorism are covered by private-public risk scenarios. Key figures from this high-stakes sector of the risk world explain how political and insurance leaders have found common ground, and where the next large-scale risk safety nets will appear.

Panelists

Barry Gilbert	Tim Richison	Prof. Howard Kunreuther	Lee McDonald
Citizens Property Insurance	California Earthquake Authority (formerly)	University of Pennsylvania	AM Best (moderator)

Regulatory Update

Arizona names new regulator; Colorado extends reinsurance program; Vermont RRG liquidated and Florida protects genetic information.

egulator: Arizona
Gov. Doug Ducey has
appointed Evan Daniels as
the new director of the state
Department of Insurance and
Financial Institutions.

Daniels currently serves as the unit chief counsel of the technology, innovation and privacy unit at the Office of the Arizona Attorney General, according to a statement from Ducey's office.

In Daniels' current role, he manages the team supporting consumer protection in litigation, investigations and in providing subject matter expertise, it said. That includes oversight of Arizona's first-in-the-nation regulatory "sandbox" for fintech, following the passage of legislation in 2018, it said.

reinsurance: A reinsurance program used to cut health care premiums on Colorado's individual market got extended another five years under a bill signed by Gov. Jared Polis.

The reinsurance measure creates a new fee on health carriers to fund the state's reinsurance program and provide state subsidies to help low-income consumers, including undocumented individuals, enroll in health insurance plans.

The bill passed the Democrat-controlled legislature in June.

It will impose a 1.15% fee on nonprofit health insurers and a 2.1% fee on for-profit

Lloyd's Exits Three US Admitted Markets

The move is intended to focus the company on nonadmitted, E&S lines.

by David Pilla

n an effort to strengthen its focus on the U.S. reinsurance and excess and surplus insurance markets, Lloyd's said it will give up its admitted licenses in the U.S. Virgin Islands, Kentucky and Illinois.

The move is part of a strategy to focus on its core markets as Lloyd's is the market leader in U.S. reinsurance and E&S, Lloyd's said in a market bulletin.

The licenses to be relinquished collectively represent \$215 million, or 1% of its annual U.S. premium income, Lloyd's said.

"Those are the only territories that Lloyd's currently writes admitted business," Lloyd's said in an email. "Lloyd's is strengthening its focus on the U.S. E&S and "This decision

strengthening its focus on the U.S. E&S and reinsurance markets, which remains our biggest market in the world."

"This decision was not related to the local markets or the business we write under the

"This decision was not related to the local markets or the business we write under the licenses, rather it was a recognition that E&S business is a better fit for our underwriters given the market's innovative nature and expertise in emerging risks," Lloyd's said in the market bulletin. "Lloyd's believes that the product flexibility of the E&S space is key to realizing Lloyd's strategic vision."

Lloyd's said the market and its key stakeholders "will need time to make changes to their commercial plans. We are therefore providing a window of 12 months during which new business will continue to be allowed."

After July 1, 2021, no new business or programs will be accepted on the U.S. licensed platforms, Lloyd's said.

"Regarding existing and renewal business, Lloyd's will be working with the regulators in the licensed territories to develop plans to nonrenew this business with as little disruption to the local markets or the business we write under the licenses, rather it was a recognition that E&S business is a better fit for our underwriters given the market's innovative nature and expertise in

emerging risks."

was not related

to the local

Lloyd's

markets and policyholders as possible," Lloyd's said. "We will issue further and more detailed guidance in due course once arrangements with the regulators have been agreed."

Driven by E&S lines, North America has replaced the United Kingdom and Ireland as the top source of income for the London Market, according to a recent report from the London Market Group and McKinsey.

Market business in the region grew 6% from 2010 to 2018, outpacing the rest of the world. Thirty-six percent of the market's \$110 billion of gross written premium originated in the U.S. in 2018, helped by a strong economy and gains in the tech sector and weather-related catastrophe, the report said.

David Pilla is news editor, BestWeek. He can be reached at david.pilla@ambest.com.

Allstate Makes Deal To Acquire National General

Allstate CEO says the acquisition increases personal lines premiums by \$4 billion.

by Renée Kiriluk-Hill

Ilstate Corp.'s \$4 billion deal to acquire National General Holdings
Corp. will make it a top-five carrier in the independent agency channel,
according to Chairman, President and Chief Executive Officer Tom Wilson.
The company will "take a run right at" an independent-agent competitor
expanding more aggressively in home insurance, he said following a
presentation showing Progressive as the personal lines market share leader,
with 13% of the market.

The pending acquisition is a cash deal, expected to close in early 2021.

"Acquiring
National General
accelerates
Allstate's
strategy to
increase
market share
in personal
property-liability
and significantly
expands our
independent
agent
distribution."

Tom Wilson Chairman, President and Chief Executive Officer Allstate "Acquiring National General accelerates Allstate's strategy to increase market share in personal property-liability and significantly expands our independent agent distribution," Wilson said in an earlier statement.

"The acquisition increases personal lines premiums by \$4 billion and market share by over one percentage point to 10%," he said.

National General's board of directors has approved the deal, which includes a breakup fee of \$132.5 million.

The main impetus for the deal was to put Allstate "squarely in front" of independent agents with good technology and a broad product portfolio, Wilson said.

It plans a reverse merger of its independent agents business into National General's network. The CEO cited National General's technology platform, agency interfaces and a management team with substantial acquisition experience.

Chief Financial Officer Mario Rizzo called the independent agency channel highly fragmented, with just four insurers holding more than 5% of a nearly \$125 billion market at year-end 2019.

Allstate would land behind Nationwide, Travelers and Liberty Mutual, each with 7% of the

independent agency market, with a post-acquisition share of 4%. Independent agents wrote about 35% of personal lines business last year and the pace of growth has remained in-line with the overall industry, Rizzo said. The National General acquisition will add 42,300 independent agents to the 10,100 Encompass and Allstate brand independent agents. "We think this provides a significant growth opportunity," Rizzo said. It would also boost Allstate's share in nonstandard automobile, an area where Allstate was once a giant, Wilson said. The company once wrote as much nonstandard as standard auto on a weekly basis, he said, but exited the line in the early 2000s.

carriers based on premiums collected. The new fees will begin in July 2021, according to a fiscal note attached to the bill. The fees are estimated to generate roughly \$94.9 million in revenue the first year, it said.

iquidation: A Vermont
Superior Court judge
has approved a request by
the Vermont Department of
Financial Regulation to issue
an order liquidating Global
Hawk Insurance Co.

Judge Timothy Tomasi signed the order in June after the department found the company, a risk retention group domiciled in Vermont, was insolvent and that rehabilitation would be futile.

According to the state's petition for liquidation, Global Hawk at the end of 2019 reported assets of \$42.7 million, including cash and invested assets of \$36.7 million, and liabilities of \$34.9 million.

By April 30, the company had 224 open cases and case reserves totaled \$11.9 million—a figure 10 times greater than its liquid assets, it said.

Global Hawk's financial condition was even worse, it said, since that figure did not include losses incurred but not yet reported.

enetic Information:
Florida Gov. Ron DeSantis
has signed a bill prohibiting
insurance companies from
using an individual's genetic
information to cancel, limit or
deny life insurance policies or
long-term care coverage.

According to a summary of the measure before it passed, Florida law prohibits health insurers from considering genetic information when issuing policies and when setting premium rates.

The prohibition, however, did not extend to issuers of life, long-term care and disability income insurance policies, it said.

This law now will cover them.

Setting the Right Tone

Insurers must clarify the role insurance can play in recovering from future pandemics.

By Stephen Catlin

am delighted to have worked in the insurance industry since 1973 and continue to believe that insurance provides tremendous value to society. However, I believe there are certain practices on which the industry could improve.

I have commented on many occasions that insurers and brokers should do a much better job when communicating with the public and with governments, especially regarding the true value that insurance provides. Secondly, it's in the nature of our business to focus on the past, and therefore we often neglect giving adequate thought about the future. Finally, I regret that—when an event occurs that causes extreme human suffering—the insurance industry often views the event primarily in terms of dollars and cents.

Over the years, we have identified a list of potential 'Big Ones,' events that could cause severe financial stress for insurers and reinsurers. These events range from a Category 5 hurricane that strikes at the heart of Miami to a powerful earthquake devastating Los Angeles or Tokyo. Over the past two decades, an extreme act of terrorism was added to the list.

However, until recently, relatively few insurers would have guessed that a pandemic could be the costliest event the industry would face. I believe that neither governments nor insurers had truly contemplated the economic consequences of a pandemic, in part because the financial impact of such an event is extremely difficult to model.

Unfortunately, the coronavirus has amplified some

Best's Review contributor Stephen Catlin is the founder of Convex Group and Catlin Group and former executive deputy chairman of XL Catlin. He is a member of the International Insurance Society's Insurance Hall of Fame. He can be reached at bestreviewcomment@ambest.com.

of the things that I believe the industry often does poorly.

It is not my place to comment on whether individual policies provide coverage for potential claims arising from COVID-19. However, I can say that I was dismayed at the defensive nature of some insurers' statements as the crisis began to expand. There always has been widespread public distrust—if not disdain—for the insurance industry, and the comments uttered by some insurers did not help our relationships with governments and our customers.

As I often have said, it's not what you say, but how you say it.

Now that it appears that COVID-19 may be the costliest event in the industry's history, we must begin to think ahead. Will society face pandemics of a similar magnitude in years to come? While I hope

we will not, I suspect that we will. If so, what should be the role of the insurance industry? Should we simply adopt policy wordings that make it crystal clear that insurance coverage will be of little benefit to policyholders for future losses arising from a pandemic? Or, should we think about how insurers can play a meaningful role in economic recovery while still protecting the industry's capital base?

Projects are under way in several nations to clarify the role that insurance can play—in conjunction with government—if and when a similar crisis develops.

In the United Kingdom, I am chairman of the steering committee of a project dubbed 'Pandemic Re.' Our purpose is to strengthen the U.K.'s economic resilience by devising a mechanism to allow small and medium-sized enterprises (SMEs) to purchase insurance covering losses from future pandemics and,

potentially, other catastrophic, difficult-to-insure risks.

To do this, we have formed six working groups—made up of a diverse group of leaders including insurers, reinsurers, brokers, policyholder representatives and a former Cabinet minister—which will explore the best ways to achieve our goal. We then want to share these suggestions with the government, working alongside officials to ensure that the interests of the public and private sectors are aligned.

The coronavirus has posed yet another substantial challenge to the insurance industry, and we must now speak with a helpful, considerate, thoughtful and structured voice. The work of industry projects, such as Pandemic Re, to respectfully offer potential solutions to governments will help the insurance industry to play a measured but meaningful role in the economic recoveries from future pandemics.

Making Waves

COVID-19 reveals a possible future upswell of liabilities for insurers.

вv Bob Reville

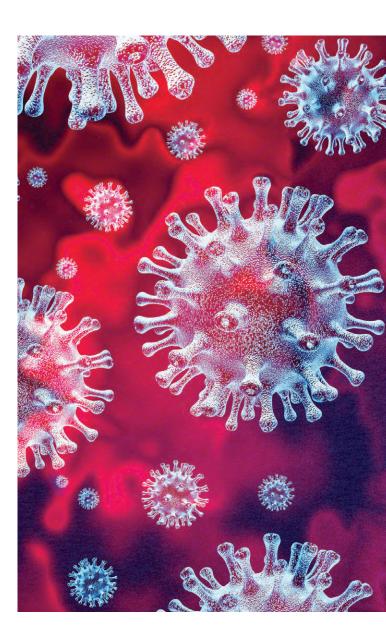

OVID-19 is an emerging liability catastrophe which is only slowly revealing its contours, but we are beginning to see the outline of the first wave of cases. There have been 165 complaints filed in state and federal courts across a range of industries from health care to meatpacking. As time progresses, and narratives of responsibility for the actions evolve, later waves may emerge. As with any liability catastrophe, insurers will need to track the early litigation while also managing exposure to potential later waves.

The industry with the largest number of filed cases so far (55) is deep-sea passenger transport such as Carnival and Norwegian Cruise Lines, including both personal injury and securities cases. We expect to see cross-line clash like this in other highly impacted industries as well. Since cruise line outbreaks were early and have stopped, we do not expect this industry to stay at the top. The second-largest number of cases is against nursing homes and assisted living facilities, which have so far seen at least 40 cases filed by residents. With over 50,000 nursing home deaths nationally, we expect this number to grow significantly.

We can look to past liability catastrophes to help anticipate the outline of later waves. In asbestos, the first wave was workers' compensation, the second was product liability, and the third included

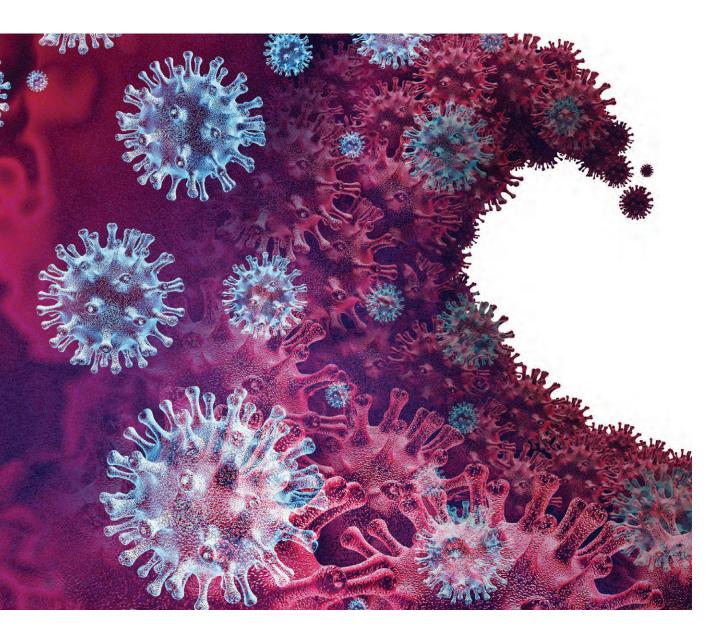

Best's Review contributor **Bob Reville** is chief executive officer of Praedicat. He can be reached at reville@praedicat.com.

"take-home asbestos" where children or spouses of workers sued for illnesses caused by asbestos fibers taken home from work.

We see "take-home COVID-19" as a significant risk in coming months due to occupational transmission along with very high rates of intrafamily transmission. We estimate that 8% to 11% of COVID-19 deaths were family members of workers in essential industries who acquired COVID-19 at work. The potential defendant industries include construction, retail, health care and meat production. This represents a significant liability insurance risk which, while not yet present in the court data, requires exposure management.

Even greater risks may ultimately emerge. COVID-19 has been a fiscal catastrophe for

local and state governments both from public health expenditures and lost tax revenue. With the litigation precedents of tobacco and opioids, a later wave of COVID-19 litigation could seek reimbursement for the public health expenditures targeting industries that the governments may deem as having been responsible.

While the specific causes of action or defendant industries are unclear at this stage, based on media reports and scientific articles, we have been developing scenarios for litigation against airlines for introduction of the pandemic, and against processed food manufacturers for driving health risks (such as diabetes and obesity) that increase the vulnerability to COVID-19 in the population. While both

scenarios seem unlikely today, they have precedents and parallels in prior litigation that make it unwise to ignore the risk.

Finally, nobody knows if the pandemic is nearly over or still early in its course, but the responsibilities of corporations to their employees, their families and to the community at large are becoming increasingly clear. When companies are the source of community outbreaks and intrafamily spread, corporate policies around reopening offices, sick pay, providing masks, or offering future vaccinations may be a factor in future liability. Insurers may avoid this risk with exclusions, or may embrace the opportunity to help their clients reopen by underwriting the risk, perhaps with innovative new products, and managing aggregations.

Silver Lining

New compliance regulations are spurring insurers to build frameworks for a strategic ROI.

By Tim King

flac expects to spend \$60 million through 2021 in order to comply with Long Duration Targeted Improvements accounting standards. In addition to LDTI (or similarly, IFRS 17 outside the U.S.,) two other regulatory trends include consumer data privacy protections and sales practices standards. The potentially significant price tag of compliance leaves carriers asking: If there are required investments in technology and business processes to comply with, how can we repurpose those investments for strategic impact in other areas?

Strategic return on investment in the context of compliance presumes that the cost to comply with a given regulation is relatively fixed (e.g. the investment) and that the strategic return is manifested in noncompliance-related improvements, such as increased sales or reduced overhead. To benefit from this strategic ROI, insurers must recognize that the underlying data and related analytics used for compliance is also helpful for improving customer-facing and internal business processes.

The framework to accomplish this has three components:

- Analysis of regulation fundamentals.
- Categorization of the underlying data requirements.
- Analytics-driven process improvements that can be realized through fulfillment of the aforementioned data requirements.

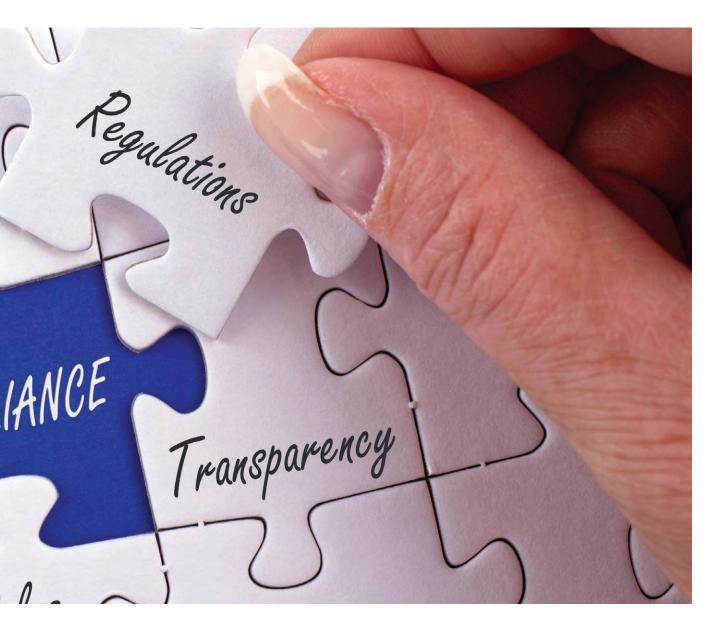

Best's Review contributor **Tim King** is an industry consultant in Teradata's Financial Services Enterprise Consulting Team. He can be reached at *tim.king@teradata.com*.

While the three categories of regulation vary from a business perspective, there are similar recurring data needs behind the stated objectives. All require the synthesis of data across multiple phases of the insurance value chain. For accounting regulations, this means marrying claims, premium and demographic data to project cash flows. Right-to-be-forgotten mandates require access to consumer data generated from any touch point with a customer. Monitoring of sales tactics necessitates the blending of consumer net worth and risk tolerance information with details of products sold.

Similar commonalities exist for speed and/or frequency of access to data. New accounting regulations stipulate more frequent cash flow projections. The California Consumer Privacy Act requires a 45-day

response time to each individual request. Life and annuities sales teams must accelerate assessment of "best interest" to not miss sales opportunities. From a granularity standpoint, all three regulations require policy level mobilization of data.

Regardless of the business case, a broad spectrum of business processes can benefit from investments made in the name of compliance. The marketing and sales functions require greater granularity of historical customer interactions needed to understand all historical interactions. Speed is key to differentiate and hyperpersonalize the purchasing and servicing experience.

Underwriting faces massive data complexity to supplement human judgment in large account underwriting. A want-it-now mentality in personal lines underpins the need for timeliness. Granularity of customer data, both internal and external, is paramount for hypersegmenting risks. Equipped with more agile access to highly granular claims data, claims teams are better positioned to detect fraud, identify subrogation opportunities and inform claim triage.

To realize strategic ROI on activities otherwise forced upon insurers by new regulations, carriers must view compliance as an opportunity to derive strategic value by improving customer experience, driving revenues and making smarter pricing and underwriting decisions.

Insurers who align the broad data needs of revenue-generating and customer-facing C-suite stakeholders with compliance-driven investments in technology will be best positioned to deliver the most total value.

Reinsurance & BI Claims

Reinsurers need to evaluate their obligations, especially if legislation is passed expanding their exposure.

By Peter McNamara

tatewide closure orders across the United States already have spawned numerous lawsuits throughout the country by policyholders seeking coverage for losses resulting from state-mandated closures of their businesses.

The policyholders often assert that their revenue losses are compensable under business interruption coverage commonly provided by commercial property policies. Typically, the coverage form states that the insurer "will pay for direct physical loss of or damage to Covered Property at the premises described in the Declarations caused by or resulting from any Covered Cause of Loss."

The claims arise in a variety of contexts, including loss of income resulting from orders limiting restaurants to takeout service and, as some states begin to reopen, limitations on seating capacity, as well as business interruption or expense resulting from disruptions involving key suppliers to customers. While "business interruption" no doubt has occurred on a widespread basis throughout the country, significant coverage issues often are presented by such claims.

The analysis of the potential ramifications of such claims to reinsurers starts, as always, with the relevant contract terms, including follow-the-fortunes/follow-the-settlements and original-conditions provisions, which generally are intended to align reinsurance coverage with that of the

Best's Review contributor **Peter McNamara** is a partner at Rivkin Radler in Uniondale, N.Y. specializing in complex insurance coverage and reinsurance matters. He can be reached at peter.mcnamara@rivkin.com.

underlying policy. Such provisions will need to be carefully considered by reinsurers in evaluating their obligations, particularly if legislation expanding their cedents' exposure to business interruption losses is enacted.

Although many property policies do not define "direct physical loss" for business interruption coverage, courts generally have required that the insured premises sustain some demonstrable physical damage. Insureds may argue that a finding of the presence of COVID-19 at the insured premises entitles them to coverage for their business interruption losses. Even assuming that position can be established, some courts have held that there is no physical harm where the functionality of the insured premises can be restored by cleaning or sanitizing. Issues also

are presented as to the length of time a business closure due to the presence of COVID-19 in the premises would be covered.

Recognizing the limitations in business interruption coverage in the context of COVID-19 claims, legislation is being considered at both the state and federal level intended to effectively compel coverage for claims arising from the pandemic. Legislation proposed in several states would require insurers to pay for business interruption regardless of whether there is physical property damage, or an applicable exclusion. The insurance industry is opposing those proposals.

State legislatures, however, previously have passed laws expanding the scope of coverage in response to other disasters. Although such legislation presents a number of issues, including

constitutional issues, the possibility that such legislation may be enacted cannot be dismissed. Any such expansion in coverage likely will have ramifications to the reinsurance industry.

Absent the enactment of legislation altering the scope of the coverage, payments for COVID-19 business interruption claims that clearly are not covered generally are not reinsured. Thus, if losses are paid in response to pressure from regulators, reinsurers may be within their rights—business considerations aside—to deny insurers' claims.

Claim payments that are mandated legislatively, however, put the insurers' reinsurance claims payments in an unsettled area. Reinsurers need to closely monitor proposed legislation and regulatory initiatives that potentially may impact the scope of their obligations to their cedents.

ACTUARIAL RESOURCES, INC.

Reinsurance

The Case for ERM

Rob Walling, principal and consulting actuary for Pinnacle Actuarial Resources, said that in this economic climate actuaries should be asking their captive insurance clients a lot more questions. "They're going to be requesting more data, and they're going to be looking at the data differently than they would in a year that didn't have substantial external changes," he said. The following are excerpts of an interview.

What impact is the global COVID-19 pandemic having on captive insurers?

It's forcing almost every captive to be much more thoughtful in evaluating their insurance program and to consider revising their coverage retentions, and coverages. We're seeing so many different coverages being impacted by COVID and the insurance markets themselves are also having an effect. So it's a very dynamic period in that there's no captive that's just renewing at expiring.

Has the economic downturn highlighted the need for enterprise risk management (ERM) for captives?

Not so much the economic downturn, per se, but the cyclical turn in the insurance market, the hardening of the insurance market. We're seeing reinsurance rates go up substantially. That was occurring even before COVID came to roost in the U.S. But now, the additional claims associated with COVID are exacerbating the problem. The economic conditions in the insurance market and in the reinsurance market are really highlighting the need for ERM. You're faced with a situation where you've got to decide between a 50% increase in your property insurance premiums or moving some of that coverage into a captive. A lot of the ERM that's going on right now is really assessing the economic risks that keep you up nights and rethinking how you design your overall risk financing program between your captive and the commercial policies you buy.

Is the role of the actuary more critical during times of economic uncertainty?

There's an opportunity for an actuary to play a greater role. Whether the actuary steps up to that challenge remains to be seen, but there's certainly an opportunity. A situation like the current crisis is begging for data, and it's very challenging from a data perspective. There's not a lot in the actuarial toolkit that makes looking at the historical data and using it to accurately project what 2020 is going to look like an easy or routine process.

Rob Walling

Principal and Consulting Actuary Pinnacle Actuarial Resources

"The current economic climate has given captive insurers an opportunity to look at ERM through new eyes and with new information."

Go to the Issues & Answers section at *bestreview.com* to watch an interview with Rob Walling.

What advice are you giving to captive managers that you weren't giving them a year ago at this time?

It's really important to be very intentional when we're going through these very dynamic periods. So, the more time that you can have for evaluating the insurance program, really understanding where your coverage gaps might be, having a thorough understanding about what the commercial markets are going to be doing with your renewals all go into the process of making sure that your overall risk financing program is well-designed. Making sure that your coverage gaps that you've either known about for a time or identified through the COVID experience are being addressed, and making sure you're making the right financing decision between financing and exposure in a captive versus keeping it in the commercial insurance market.

Captive Update

Vermont governor signs new captive bill to reduce minimum capital threshold, increase flexibility.

by Frank Klimko

ov. Phil Scott has signed legislation to streamline Vermont's captive insurance laws, reducing the minimum core capital for a sponsored cell from \$250,000 to \$100,000, and allowing the creation of separate accounts within a cell of a sponsored captive.

The law is intended to increase efficiencies while adding flexibility to regulatory policy and procedures, the governor said in a statement.

The law seeks to increase the viability of Vermont's captive protected cells, which are alternative risk-transfer mechanisms that often operate like a stand-alone captive.

"One of the key changes recognizes the importance of cells in the captive industry, and makes it clear that a cell can operate—and should be regulated—much the same as an individual captive," Deputy Commissioner of Captive Insurance David Provost said in a statement.

The law allows cells to form separate accounts within a given cell of a sponsored captive. So-called cell captives—or a protected cell company—wall off each insured's assets. The provisions mirror those applicable to stand-alone captives and extend

Frank Klimko is Washington correspondent, *BestWeek*. He can be reached at *frank.klimko@ambest.com*.

the protections of statutory clarity, according to a statement from Scott's office.

In addition to reducing the minimum core capital threshold, the law gives additional investment flexibility to sponsored captive companies. Sponsored captives may be set up by an insurance industry-related entity to be used by its clients. The sponsor contributes to the captive's core capital.

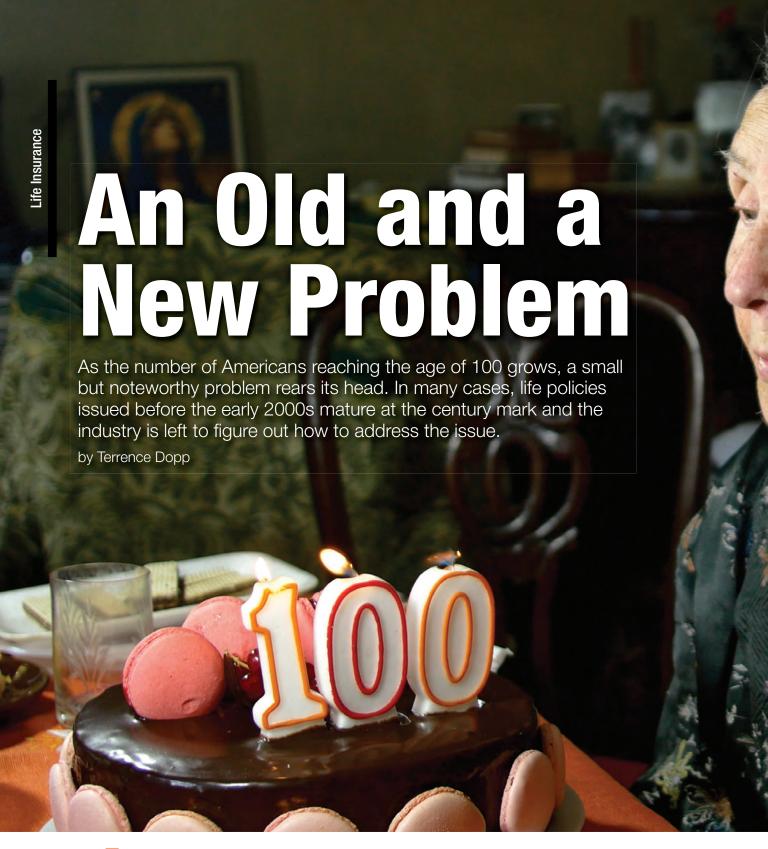

The new law also will simplify captive disclosure requirements, align state law with the National Association of Insurance Commissioners' statutory accreditation standards for risk retention groups and allow dormant captives to remain intact at a minimum capital level so they may be reactivated in the future, the statement said.

Richard Smith, president of the Vermont Captive Insurance Association, said the new law will help the industry.

"Even in the midst of a pandemic where the attention of the governor and legislature is rightly focused on the health and welfare of its citizens," Smith said, "Vermont's state leaders came through and passed a bill that updates and strengthens Vermont's captive insurance statutes."

The state has roughly 600 licensed captives, Provost recently said. Vermont captives wrote \$22.6 billion in premiums in 2019, he said.

BR

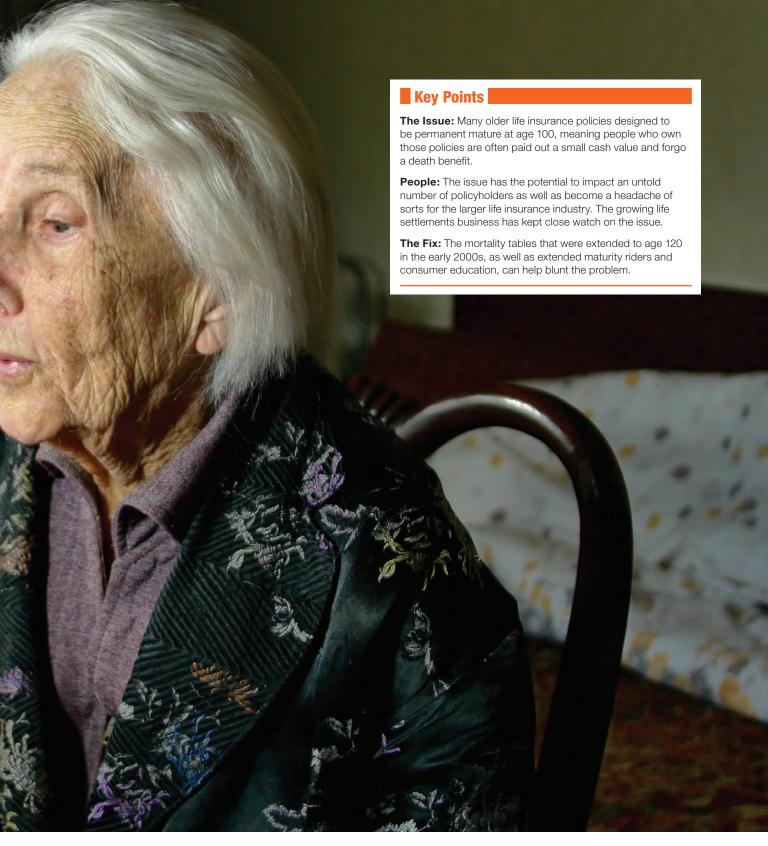

ames Bainbridge, a Philadelphia attorney with 15 years of experience in insurance law who has represented all facets of the insurance world, was vaguely aware of the age 100 issue in permanent life

Terrence Dopp is a senior associate editor. He can be reached at *terry.dopp@ambest.com*.

insurance when the trust set up by Gary Lebbin first contacted him about representing it in a suit against Transamerica Life Insurance Co.

Bainbridge came across this issue several years ago while writing for a trade group, the Association for Advanced Life Underwriting. He'd also discussed the issue with Joseph M. Belth, a professor emeritus of insurance at Indiana University, who'd been

warning of the issue since the early 2000s. While many companies have offered extended maturity riders and taken steps to correct the situation, others such as Transamerica have turned to litigation to avoid such actions, he said.

Lebbin had purchased whole life policies for himself and his wife from Transamerica. When he reached 100, the company said he'd reached the maturity age and was set to receive the cash value of the policy rather than a tax-free and higher death benefit.

"I do believe it's a case of first impression," Bainbridge, founder and owner of The Bainbridge Law Firm, said, referring to a novel legal action that sets precedent. "The Court's decision finding language in Transamerica's universal life insurance

"This is in one sense a new problem, or relatively recent, and in another sense it's a very old problem."

Steven Weisbart Insurance Information Institute

policies in question incomprehensible will have implications for elderly insureds and their families who have had or will have their policies terminated at or near age 100."

The so-called age 100 issue is a small but fascinating problem in the permanent life insurance world that for the companies is proving more of a headache than a cataclysm in the making.

The number of Americans age 100 or more has grown steadily in recent decades, according to the U.S. Census Bureau. In the 1980 count, the agency registered 32,194 people who reached that milestone or a statistical 1.42 people out of 10,000.

The 85-and-over population is projected to more than double from 6.5 million in 2017 to 14.4 million in 2040 (a 123% increase), according to the 2018 Profile of Older Americans, a report from the Administration for Community Living, which includes the Administration on Aging, an operating division of the U.S. Department of Health and Human Services. Also, there were 86,248 persons

age 100 and over in 2017 (0.2% of the total age 65-and-over population).

For the small subset of these folks who hold an in-force permanent or whole life policy written prior to the change in the extended mortality tables in the early 2000s, reaching 100 can mean hitting the terminal age of their policies. Because it was so rare in the past, policies were issued with that age as a hard wall at which the (lower as a rule) cash value of the policy was paid out and the death benefit canceled.

"This is in one sense a new problem, or relatively recent, and in another sense it's a very old problem," said Steven Weisbart, senior vice president and chief economist at the Insurance Information Institute. "Numerically, I don't believe it's a large problem in terms of number of people affected, but for anyone who is in that category, it's an issue."

The III focuses on creating and releasing information designed to help insurance consumers. It's made up of 60 insurance carriers and the group doesn't sell insurance or lobby.

In the early 2000s, the Commissioners Standard Ordinary Table was updated to push out that terminal age to 120 for the sake of industry planning and determining premiums in a move that largely insulates people who bought later policies from the quirk of aging. No reliable accounting exists for how many people may be caught in the loopholes and facing the issue head on.

Weisbart said the issue largely revolves around estate planning: People tend to make tax-free life insurance a centerpiece of their strategy. If they are paid a cash-value upon reaching the century mark, not only will the payout be reduced by some portion but it may also be subject to income taxes. In many cases this could undercut the benefit of passing on that money.

"From an income tax point of view, to the individual insured, it could be a pretty hefty income tax liability that wasn't planned for, wasn't desired and contradicts an estate plan," he said.

It's an issue few want to talk about.

Michael Lovendusky, vice president and associate general counsel at the American Council of Life Insurers, said the issue is due to the changing times. The specifics of life insurance policies vary depending on the unique needs of the insured, issuers and regulations, he said. He pointed to the mortality table revisions as an example the

"The Court's decision finding language in Transamerica's universal life insurance policies in question incomprehensible will have implications for elderly insureds and their families who have had or will have their policies terminated at or near age 100."

James Bainbridge The Bainbridge Law Firm

industry has taken to address the issue.

"In addition to reading the terms of their policy, policyholders concerned that they are approaching their maturity age should consult with a financial adviser to discuss the impact of these details on their overall tax situation and what courses of action are open to them," Lovendusky said in an email.

Lebbin v. Transamerica

The most high-profile example of this issue has been the breach of contract lawsuit *Lebbin v.Transamerica Life Insurance Company* that Bainbridge has been involved with. The insurer is now appealing the decision.

Gary Lebbin was born in September 1917 in Germany and immigrated to the United States in 1938 to escape Nazi persecution. He was married to Bernice Lebbin and they had two children, four grandchildren, and seven great-grandchildren before she died in 2015 at age 97. In 1990, he created a trust that purchased two second-to-die universal life policies from Transamerica with a total face amount of \$3.2 million. His two children are the trustees.

Second-to-die policies insure two lives and pay a death benefit upon the death of the second one covered. A judge in April found in favor of the Lebbin family on its claim of a breach of contract and awarded \$2.53 million in damages, according to court documents.

Transamerica has placed about \$2.8 million in escrow and is now appealing the decision in the U.S. Court of Appeals. A Transamerica spokesperson said they couldn't comment given the pending legal case.

"It is an understatement to say the age 100 problem is serious. Indeed, I think the problem is the Achilles' heel of life insurance," Belth wrote in

a 2017 blog post raising interest in the issue and that case. "The bedrock principles of life insurance marketing are the income-tax-deferred inside interest and the income-tax-exempt death benefit."

In the course of reporting for this story, most of those interviewed cited Belth as the premier expert on the issue in the U.S. He declined to comment beyond the blog posts on his website. He first began raising the issue from the consumer perspective in 2001.

Both he and Bainbridge believe the outcome of the case could prompt a class-action lawsuit, and that would be the only way to force the industry and other interested parties to address the age 100 problem. If the suit made it past initial challenges by insurers seeking to have it dismissed, all sides would have strong incentives to avoid trial through a settlement, and that outcome would be in the public domain.

"I wouldn't be shocked if it went in that direction," Bainbridge said. "That's kind of the natural evolution."

Life Settlements

Much like the scope of the problem itself, the life insurance industry's potential exposure can't readily be quantified. In-force individual life insurance protection in the U.S. totaled \$12.1 trillion at the end of 2018, according to ACLI data. Determining a number would require figuring out the actual percentage of those who are over 100.

But one facet of the greater insurance industry that has kept a keen eye on this issue has been the life settlements business.

Simply put, life settlements are the sale of life insurance policies for more than the cash surrender value but less than the death benefit. The buyer

"Most sophisticated [life settlements] investors are acutely aware of [life insurance policy] extension risk."

Christopher Conway ISC Services

agrees to continue paying premiums for the life of the insured, making the issue of life expectancy doubly crucial.

The market, which only kicked off in a meaningful way as a method for people to cover health care costs through so-called viatical settlements during the AIDS epidemic, has seen its ups and downs. But the most recent tabulation by global asset management firm Conning was that the market settled \$3.8 billion in face value in 2018.

Prior to the 2008 financial crisis, the market had swelled to as much as \$12 billion. However, like many facets of the financial world, it saw that size contract, Scott Hawkins, the firm's director of insurance research, said. Now investors looking for returns amid the low interest rate environment and growing consumer awareness have seen it grow and by 2028 Conning is predicting \$6.4 billion in settlements.

"Robust is a relative term," Hawkins said.
"Investors lost interest, capital dried up and the market fell down to a billion and a half until about two or three years ago. That said, it's definitely turning around."

Along with growing demand on the part of investors, he credits greater awareness on the part of policyholders and financial advisers for the increase. In some cases, regulators are also requiring a notice to life insurance policyholders before a possible lapse letting them know settlement is an option.

Christopher Conway, a principal and chief development officer at life expectancy consultants ISC Services and chairman of the Life Insurance Settlement Association, said within the settlements world providers have begun looking at maturity extension risk in a new light. He's been involved in the industry for 30 years and ran two firms serving as providers linking buyers and sellers in the market.

He said his industry is a "constituent in the concern surrounding that issue" because many of their portfolios still contain earlier policies that could potentially bump up against the terminal age.

For those policies predating the change in life insurance products to include maturity extension provisions, he said even seven to 10 years ago only a few investors were addressing this as an important part of their due diligence and now it's a normal part of the evaluation process on life settlements.

If the person reaches 100 without an extension rider or provision in their policy, settlement investors and providers can lose money on the deal. Likewise, if they anticipate an 85-year-old has a four-year life expectancy that ends up being much longer, the extra premiums they pay could eat into or overtake their investment.

"Most sophisticated investors are acutely aware of extension risk and the possibility that, particularly for a large policy usually owned by a wealthy, well-advised person, is likely to extend due to their access to better health care and by enjoying a better lifestyle," he said. "So, they factor that into their pricing and their analysis before they would take an age 100 risk and, as a result, the investor will usually require some form of extension rider."

Conway said he isn't aware of people rushing to sell policies before they hit the terminal age and the issue has primarily impacted those on the buy side of the transactions.

"In theory, if consumers were more aware of life settlements and they were then made aware that your policy doesn't have an extension rider and therefore might be less valuable down the road if you decide to sell it, it might cause certain consumer behavior," he said. "It might drive a change in agent behavior or in the types of policies being sold."

Indispensable Analysis. Timely Information.

Best's Insurance Reports®

P/C, US & Canada • L/H, US & Canada • L/NL, Non US

Best's Insurance Reports brings together insightful analysis and the most up-to-date insurer information, to support top-level research and intelligent decision making.

Best's Credit Reports focus exclusively on the details and analysis supporting the current Best's Credit Ratings at the time they were assigned.

Best's Financial Reports offer the most recent company information and financial data for insurers and groups.

New Rules

Regulatory and accounting changes may reshape parts of the life/annuity business environment.

by Mary Pat Campbell

hile COVID-19 has grabbed the world's attention, life/annuity insurers are preparing for a major disruptor of their own: a series of new regulatory and accounting standard changes. These new rules may provide significant challenges for the life/annuity industry in general and for some insurers specifically over the next several years.

Three changes are of note: the introduction of Current Expected Credit Losses (CECL), the implementation of new approaches to accounting for life/annuity liabilities, and increased requirements surrounding the sale of life and annuity products. These changes may have significant and long-term fallout, affecting

product design, distribution business models, and even asset/liability management. The likely impact is increased complexity, and unfortunately will likely be more taxing on insurers with more modest resources.

Contributor **Mary Pat Campbell**, FSA, MAAA, is a vice president in Conning's Insurance Research unit. She can be reached at *marypat.campbell@conning.com*.

Market Conduct: Best Interest, Fiduciary Duty or Suitability?

One of the least settled of these changes involves regulations on the sale of annuities and life insurance products. Part of the issue is competing regulators: the Department of Labor (DOL), the Securities and Exchange Commission (SEC), the National Association of Insurance Commissioners (NAIC), and individual state regulators. These groups often have overlapping jurisdiction surrounding products, leading to overlapping requirements for insurers and distributors. While regulators have customer protection as a goal, they have different perspectives on how best to achieve it.

Figure 1 illustrates the regulatory impact. When the SEC attempted to assert its power by regulating the sales of indexed annuities in 2008, product sales in 2009 and 2010 fell notably. The Grassley Amendment in 2011, undoing SEC oversight, led to a rebound in sales. When the DOL's fiduciary duty rule was implemented in 2016, annuity sales decreased the following two years. The rule was struck down in federal court March 2018, and the recovery in annuity sales can be seen in 2018's full-year sales.

After its fiduciary rule was struck down, the DOL said it would revise its proposal by a then-announced deadline of September 2019. However, September 2019 saw the appointment of a new Secretary of Labor, not a revised fiduciary rule.

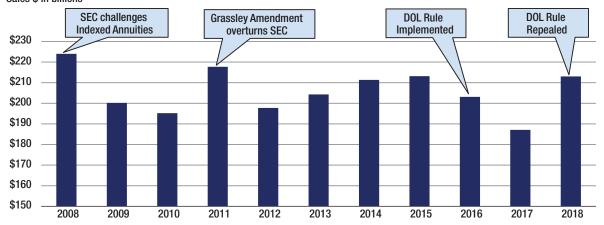

Other regulatory bodies have been active, however. The SEC issued a final rule, Regulation Best Interest: The Broker-Dealer Standard of Conduct (Reg BI) in June 2019, with an effective date of June 30, 2020. At the beginning of June 2020, the DOL sent its new fiduciary rule to the Office of Management and Budget for review, intending to align with the SEC's efforts. The NAIC created the Annuity Suitability (A) Working Group in 2017 to update the Suitability in Annuity Transactions Model Regulation (#275) to provide more uniformity between the states. The Working Group made its recommendations in 2019 and in February, the NAIC membership approved the revision. It is up to individual states to adopt the model regulation.

While the DOL, SEC and NAIC were seeking nationwide standards, individual states developed their own laws and regulations. The regulation that could have the greatest impact is New York's Regulation 187, which set a best-interest standard for both annuity and life insurance sales. The annuity portion of the regulation went into effect in August 2019, which led to multiple companies suspending sales in the state. Jackson National suspended the sale of fee-based annuities in New York, and Penn Mutual suspended all annuity applications. However, insurers re-entered the market after the NY Department of Financial Services provided some clarification on requirements. The annuity portion of the regulation is already showing teeth. In April 2020, three insurers agreed to pay more than \$2 million in restitution and penalties to New York State for annuity replacement transactions that violate the state's Regulation 187.

All these cases have featured lawsuits, either by carriers or competing regulatory bodies. In the case of SEC's Reg BI, a coalition of attorneys general from

seven states plus the District of Columbia challenged the regulation in federal court. Insurance carriers unsuccessfully sued New York with respect to Reg 187.

In all these cases, regulations have increased requirements for distributors and call into question certain sales practices, such as bonuses for reaching sales targets and even traditional commissions. New York's Reg 187 adds on several more educational requirements for producers, paperwork for compliance, and post-issue requirements that never existed before. For example, if an insurance agent is involved in the conversion of a term life insurance policy into a permanent life insurance policy, that is considered a transaction and requires full documentation under the highest level of sales requirements. The life insurance portion of New York's Reg 187 went into effect on Feb. 1, and the effects are yet to be fully felt, especially as COVID-19 has slowed down life insurance sales. However, the increased compliance requirements likely will depress sales of both annuities and life insurance in New York.

Accounting for Credit Risk: CECL

The Current Expected Credit Losses (CECL) measurement was developed by the Financial Accounting Standards Board (FASB) in reaction to the tardy way banks recorded credit losses during the runup to the credit crisis of 2008. (The new standard was arguably tardy itself in its decade-long development.) The Accounting Standards Update (ASU) including CECL was announced in 2016 and went into effect for large SEC reporting companies for calendar-year reporting starting this year. Implementation for smaller reporting companies and other entities have been delayed until 2023.

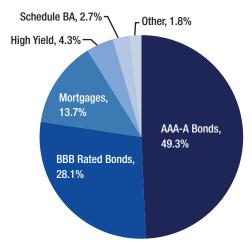

CECL's purpose is to create an allowance for expected credit losses, especially for assets not held at fair value. Assets held at amortized cost, such as commercial mortgages, would be subject to a more complicated method of accounting for the embedded credit risk.

Prior to CECL's introduction, credit losses weren't accounted for under GAAP until a credit event occurred. The problem: Many banks knew they were carrying poor credit risks in the form of residential mortgages, but as long as they didn't recognize a credit event, the banks didn't have to write down the assets.

With the new accounting standard, entities must reflect an asset's expected credit loss throughout its lifetime, updating that expectation during each

Figure 2 **Life Insurers May Be More Affected Due to Illiquid Investments**

accounting period. Again, assets that have a fair value reflected in market prices, where the market is deep and liquid, likely do not require many such adjustments.

However, commercial mortgages originated by life insurers—a significant portion of many life/ annuity company portfolios (**Figure 2**)—and similarly illiquid assets may require more complex accounting. While the standard mentions potential approaches to measuring the expected credit loss, there is no one method prescribed and, more importantly, no safe harbor for insurers.

Applying the CECL Approach More Broadly?

Initial measurements of CECL may have minimal impact in a benign economic environment, but a more volatile environment would likely lead to expectations of higher credit losses and may require more frequent updates and more balance-sheet volatility. Credit-loss models may require additional sophistication.

We do note that the new regulations are not all downside. For example, in the prior approach to credit losses, companies could not recognize credit improvement after an asset write-down. CECLs can move both up and down, reflecting improving market conditions. In addition, insurers could benefit from earlier identification of assets at risk and possibly avoid a sudden recognition of credit loss on an asset.

CECL is a change in GAAP, not statutory, accounting, but some are advocating its approach

more broadly. In general, statutory accounting is more conservative than GAAP due to its focus on solvency and policyholder protection. The more conservative CECL practice has sparked the interest of insurance regulators, who generally favor the most conservative practices for the NAIC. However, the current NAIC statutory approach is far simpler than CECL, and many small insurers already challenged to improve investment yield would find themselves disadvantaged further in compliance costs.

The life insurance industry has pushed back on implementing CECL in a statutory setting, arguing that asset valuation reserve (AVR) and risk-based capital (RBC) provide for capturing and regulating credit risk exposures in insurer portfolios. However, property/casualty insurers do not have an equivalent reserve as AVR, so the NAIC may yet be tempted to follow in FASB's footsteps.

Long-Duration Contracts

The final change of note is FASB's Long-Duration Contracts Targeted Improvements project, which culminated in an ASU issued in August 2018. Again, the difference between the goals of statutory and financial accounting is highlighted in the change. Life insurance products have long suffered in the investment community, partly due to the opacity in measuring life insurance performance. Aspects of the prior approach—locking in valuation assumptions at policy issue, complicated approaches to amortizing deferred acquisition costs, and infrequent testing of deviation from valuation assumptions—made it difficult to evaluate if GAAP measurements were capturing the behavior of the business.

The new ASU includes:

- A requirement to unlock liability valuation assumptions at least once a year. Before, valuation assumptions were often locked in at policy issue and never updated.
- A standardized valuation rate based on current market-observable interest rates and yields.
 Before, valuation rates were locked in at inception for many life products and differed company to company. The effect of changing rates will be recorded in other comprehensive income.
- Fair value measurement of embedded financial guarantees, to be more closely linked to derivative-measurement approaches.
- Simplified amortization of deferred acquisition costs.

 A requirement for additional disclosures, such as roll-forwards, significant valuation assumptions, and the effect of changes in those assumptions.

There is hope that tying liability values to current market conditions, as well as requiring additional detailed disclosures, may help investors better interpret life insurance business performance. However, there is concern that the additional detail can be difficult to fully and clearly implement.

In response to industry concerns about implementation, FASB announced in 2019 that the effective date for this ASU was pushed back. The new ASU will be effective for calendar-year large public insurers in January 2022, with an effective date of January 2024 for smaller life insurers and other entities subject to the rule. There will be a one-time adjustment reported when the new standard goes into effect, with an option to develop the effect retrospectively.

Regulatory Respite?

Life/annuity insurers have been buffeted by several headwinds from 2019 into 2020: three consecutive interest rate drops by the U.S. Federal Reserve from July to October 2019, impacts from the coronavirus pandemic, and another two interest rate cuts by the Fed in March 2020.

With equity markets in a roil and the interest rates at record lows, regulations developed during a fairly stable environment may be even more difficult to implement. Many regulations and laws grew out of the prior financial crisis in 2008 and 2009. Given the dilatory nature of regulatory development, we find ourselves in the middle of great volatility again, though the nature of the crisis differs this time.

In all these approaches, the focus on protecting consumers, providing good information to investors, and supporting an insurance industry that can survive and even thrive should be front of mind for regulators. However, regulators have been more focused on helping insurers ease into these more complex compliance regimes rather than removing them.

The good news is that while these approaches are often more complex than those they replaced, they do not necessarily have a negative effect, and some may relieve other pressures on insurers. In addition, as these regulations come into effect, regulators have shown a willingness to work with the life/annuity industry to help the industry survive and even thrive under these requirements.

The National Association of Insurance Commissioners is engaged in ongoing efforts to develop capital standards for U.S. insurance groups comparable to its European counterpart's and other international capital requirements.

by Dan Rabinowitz

ow much capital and surplus should insurance companies be required to hold? The answer to that question can tell us a lot about the trajectory of insurance regulation in the U.S. and its increasing interplay with regulation in the rest of the world. As we enter a post-pandemic regulatory environment, capital will continue to be a focal point for industry and regulators alike.

Contributor **Dan Rabinowitz** is partner and chair of the Insurance Transactional Practice at Kramer Levin Naftalis & Frankel LLP. He can be reached at *drabinowitz@kramerlevin.com*.

Key Points

The Situation: U.S. insurers have to meet rigorous state regulations regarding the amount of capital they must hold.

An International Influence: The International Association of Insurance Supervisors is awaiting a U.S. group capital standard that is intended to produce "comparable outcomes" to those produced by the IAIS's own capital measurement yardstick.

Waiting for the Answer: A "jurisdictionally agnostic" aggregation method, related but not necessarily identical to the emerging group capital calculation, will be the standard ultimately submitted by the NAIC, the Fed, the Federal Insurance Office and state insurance regulators to the IAIS for "comparable outcome" purposes. The NAIC's deliberations on this, and consultations with industry, are ongoing.

Capital is understood as a kind of "shock absorber" for any business, but particularly for a financial activity such as insurance that relies on solvency to make good in the future on past promises. Capital is intended, very generally, to bear the losses that may occur in excess of posted reserves. These losses may arise from excess claims on policies, volatility in investment markets or other loss contingencies. COVID-19 has been an unwelcome reminder of the critical importance of capital adequacy in insurance.

In the U.S. insurance ecosystem, we can identify two key axes of regulatory focus—state versus federal regulation and entity-level versus group-level supervision. Historically, the amount of capital that an insurer needs to hold has been subject mainly to entity-level oversight, conducted (like almost all insurance regulation) at the state level. In recent years, there has been strong movement along one of those two axes, as group-level regulation has become more rigorous. However, movement along the other axis—state versus federal—has been more episodic, with the states holding the line against a more consequential federal role in insurance.

Entity vs. Group Oversight

In the realm of entity-level versus group-level oversight, since the 1990s U.S. insurers have been subject principally to the Risk-Based Capital, or RBC, framework developed by the National Association of Insurance Commissioners (NAIC). This framework, which is codified by NAIC model laws enacted in every state, requires each insurer to determine a customized level of required capital based on its particular risks. The determination is made using a prescribed set of calculations.

The measured risks include (depending on line of business) asset risk, insurance product risk, interest rate risk, premium, reserves and business risk. The insurer then computes its actual amount of surplus ("total adjusted capital" or TAC), yielding a ratio of TAC to the benchmark required level. If TAC is below certain defined multiples of the ratio, indicating inadequate capital levels, the insurer can be subject to remedial measures and even receivership.

The 2008 financial crisis highlighted concerns over enterprise risk—the perception that risks in an insurer's affiliated businesses can adversely affect the insurer itself, even though the insurer may have sufficient capital as measured on an entity-level basis. Thus the NAIC took steps to enhance visibility into insurers' financial conditions and resources beyond the statutory entity. These steps, taken over the 2010-2012 period, included both amending the model holding company act (which regulates corporate control over insurers) to require reporting at the group, and not just insurer, level (i.e., enterprise risk reporting), and adopting the Risk Management and Own Risk and Solvency Assessment model act, which requires insurers to measure their capital adequacy at the

group level. While not primarily quantitative in nature, these steps marked a meaningful foray into group supervision.

As international efforts ramped up during this time to heighten a focus on insurance groups (e.g., ComFrame from the International Association of Insurance Supervisors, or IAIS, and the European Union's Solvency II), the NAIC followed suit in 2015 with a conceptual framework for a group capital calculation, or GCC, based on the so-called RBC aggregation approach, which came to be known as the "aggregation method." The aggregation method analysis would look at an insurer and its entire group of affiliated companies—both insurer and noninsurer—and tally up the relevant capital ratio at each in turn. This aggregated capital, after making adjustments to eliminate duplication, would yield a capital ratio for the group as a whole.

State vs. Federal

On the other axis of focus—state versus federal—a parallel effort of sorts was being undertaken in the post-crisis period to impose a greater federal stamp on the regulation of some key insurers. The landmark Dodd-Frank legislation

of 2010 had empowered the Federal government to designate non-banks, including insurers, as systemically important financial institutions, or SIFIs, and to regulate their group capital levels. Dodd-Frank also imposed new, groupwide capital standards on holding companies of depository institutions, even where those holding companies were themselves insurers that were included in the so-called Collins Amendment to Dodd-Frank, named after its author, Sen. Susan Collins (R-Maine). The Federal Reserve embarked on efforts to develop detailed capital requirements for these institutions now in its remit (or which might be designated in the future as SIFIs). For a time in the mid-2010s, it seemed as though capital standards for a number of prominent insurers might become significantly more group-oriented and significantly more federally imposed—like those applicable to bank holding companies under Basel III.

However, the state regulatory system proved durable and encouraged an alignment of industry participants, state regulators and Federal elected officials of both parties. Industry and regulators decried Basel-like, "bank-centric" capital measures that they feared might emerge from the Fed, adducing the key differences between banks and insurers. Over time, the three insurers that had initially been designated as SIFIs shed their designation, either as a result of litigation or administrative action. The Collins Amendment was itself amended in 2014 on a bipartisan basis to clarify that the capital standards for an insurance SIFI or for a holding company of a depository institution, where the holding company was itself an insurer, need not be GAAP-based. This represented a significant accommodation to state insurance regulation. In 2019, taking its cue from this Collins "fix," the Fed proposed a detailed

"building block approach" for setting capital requirements for these groups that expressly incorporated state RBC standards in the case of statutory insurance entities. State regulation had again showed its resilience.

Group-Based Standards

Contrast that with the movement toward group-based standards. Since embarking on the group capital calculation, the NAIC has received detailed feedback from industry and observers on how the tool should be constructed and deployed. Trade groups urged the NAIC to consider factors such as differentiating between insurance and noninsurance entities, minimizing the need to adjust

existing capital regimes such as RBC, neutralizing differences that might arise from corporate structure and developing "scalars" to produce apples-to-apples comparisons between entities.

These efforts reached critical mass in mid-2019 with the beginning of field testing. The NAIC Fall 2019 National Meeting took place in Austin in December against the backdrop of the IAIS's passage in November of ICS 2.0, a comprehensive capital standard for internationally active insurance groups, or IAIGs. The IAIS launched a five-year monitoring period for ICS 2.0, after which the standard could become prescribed, i.e., could be a predicate for supervisory action. (This five-year period is subject to adjustment due to the global pandemic.) In adopting the new standard, the IAIS

announced that it would seek to assess, by the end of the monitoring period, whether the aggregation method being developed in the U.S. provides "comparable outcomes" to ICS 2.0.

In other words, the IAIS is seeking a U.S. group capital standard that has equivalency with the IAIS's own yardstick. At that December meeting, the NAIC described the group capital calculation as the way in which ICS 2.0 will be implemented in the U.S. But the NAIC emphasized that a "jurisdictionally agnostic" aggregation method, and not necessarily the group capital calculation itself,

will be the standard ultimately submitted by "Team USA" (the NAIC, the Fed, the U.S. Treasury's Federal Insurance Office and state insurance regulators) to the IAIS for "comparable outcome" purposes.

Some in the industry perceive from this nuance that Team USA's aggregation method will not necessarily be identical to or co-extensive with the group capital calculation that has been in development for five years. This could include the degree to which the group capital standard will be more than just an "early warning" tool as the NAIC has historically indicated.

The spring national NAIC meeting had been scheduled for March 2020 but was canceled

due to the pandemic. As of this writing, over the spring and early summer the NAIC's GCC working group has exposed for public comment (i) draft amendments to the insurance holding company act implementing a GCC requirement as well as (ii) a GCC template and related instructions. Conference calls to discuss these materials and take next steps were scheduled for later July and also at the NAIC's Summer 2020 National Meeting (virtual format, July 28 to Aug. 14).

The move to more group-oriented capital supervision, in some format, seems inevitable. Since the pandemic could raise new issues of identifying and measuring risk, the questions of "how much capital—and where in the structure" seem as timely as ever.

"how much capital—

Pandemic Partnership

As businesses emerge from months of shutdown due to the coronavirus, insurers and reinsurers around the world work with governments to mitigate the economic impact of future pandemics.

by Kate Smith

tephen Catlin's mobile buzzed nonstop. It was early April, and he had just written a thought leadership piece on the need for a swift and coherent insurance industry response to pandemic.

Frustrated by the falling reputation of the industry and the "clumsy" comments and defensive posture of some insurers, the Convex CEO called on the insurance community to be proactive in finding a long-term solution to pandemic.

His message struck a chord.

"The phone was red-hot the minute that piece came out, with people saying, 'Thank God somebody came out and said something,'" Catlin said.

Kate Smith is managing editor of Best's Review. She can be reached at kate.smith@ambest.com.

That was the germ of the U.K.'s Pandemic Re, an initiative chaired by Catlin to develop a public-private partnership solution for pandemic.

Similar projects are under way in the United States and the European Union, as insurers look to help governments create a backstop for future outbreaks.

"Our role in society is to identify needs of protection and make sure the demand for coverage can be addressed," Renaud Guidée, group chief risk officer at Axa, said.

In June, the French Insurance Federation devised CATEX, a public-private partnership program in which private insurers would provide €2 billion of coverage annually for small businesses obligated to close.

At the same time, the German Insurance Association put together plans for a multibillion euro fund to address future business disruptions. In the United States, two initiatives were on the table—one introduced by New York Congresswoman Carolyn Maloney and the other created by industry trade groups—before Chubb floated a third option in July.

"Generally, state-backed risk pools are an adequate way to tackle pandemic risks as the pandemic risk in its entirety is by far too large to be fully covered by the private (re)insurance market," said Munich Re spokesperson Axel Rakette.

Rakette said these pools should focus on nondamage business interruption coverage for small and medium businesses.

So far, many of the efforts do. With pandemic excluded under most insurance policies, the months-long lockdowns have hit small businesses especially hard. According to JP Morgan Chase, the median small businesses holds a 27-day cash buffer in reserve. Even with pandemic largely excluded from business interruption coverage, COVID-19 is the largest-ever loss for the industry. According to Lloyd's, the insurance sector is expected to pay \$107 billion in pandemic-related claims while simultaneously watching its global assets drop by \$96 billion, bringing the total loss to \$203 billion.

"While we cannot rewrite history, we can work together to underwrite a better future—and we should start immediately," David Priebe, executive chairman of Guy Carpenter, said. "Pandemics have traditionally suffered from a panic-neglect cycle. Quiet periods see no action, early warnings of an outbreak tend to be overlooked, significant

response and funding are late and uncoordinated and valuable lessons from the crisis are not institutionalized.

"One institutionalized lesson to learn right now is that we can boost our economic resilience by forging a meaningful pandemic insurance system. Doing so will require shared action from the insurance sector, the federal government and policyholders."

It also will require a clear understanding of what the insurance industry can and cannot do to help.

"We need to communicate better than we have to governments and to the man on the street that there are certain losses, particularly those that are global and systemic in nature, which are outside the ability of the insurance industry to pay," Catlin said. "Not because we don't want to pay them, but because we don't have the capital.

"The total capital of the P/C marketplace is approximately \$900 billion. When you think about the financial consequences of this shutdown, \$900 billion is a pebble on the beach. At the very best, all we could do is be the very first loss for governments."

Pandemic Re

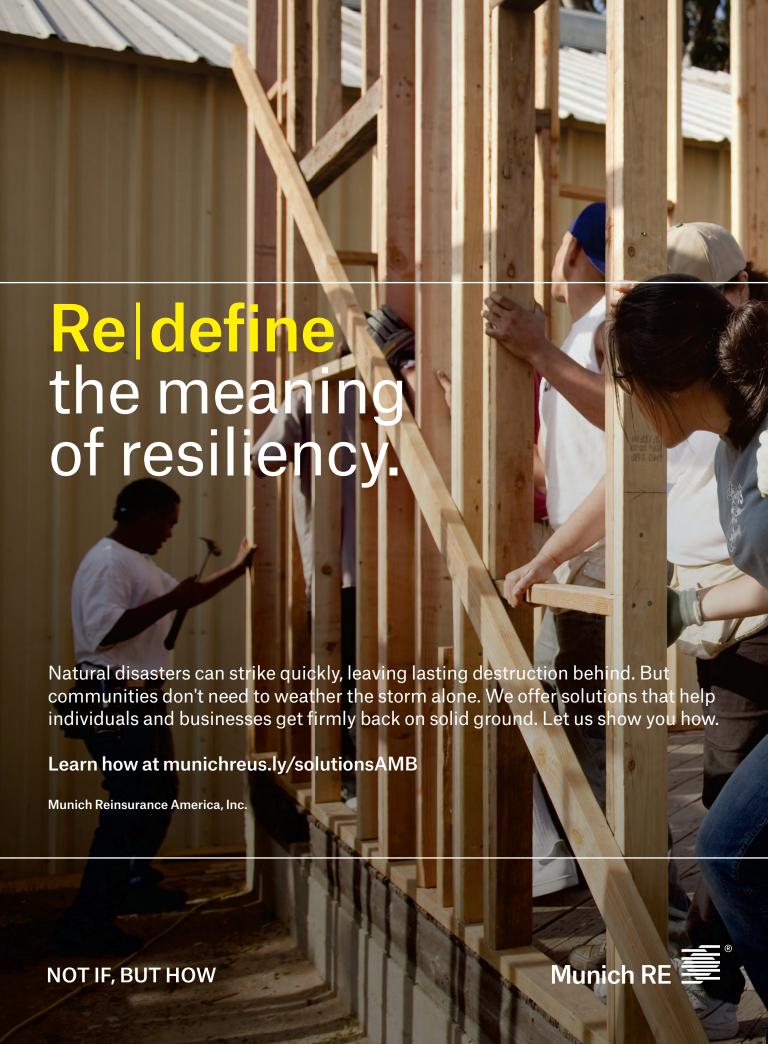

Catlin has spent more than 45 years in the insurance industry, and only a handful of times has he felt momentum like this. In the aftermath of the thought leadership piece, he said, leaders from all segments of the industry were quick to join the effort that has become known as Pandemic Re.

Catlin pulled together a steering group of industry heavyweights for the initiative—Pool Re CEO Julian Enoizi, former Aviva CEO Maurice Tulloch, RSA CEO Stephen Hester, Willis Re CEO James Kent, Nick Frankland, UK CEO of Reinsurance Solutions for Aon, and James Nash, CEO International for Guy Carpenter.

"I told everyone, if you're going to get involved in this, 1) it's pro bono, and 2) you've got to wear an industry hat, not a corporate hat," Catlin said. "Those were the conditions."

The steering group established six working groups supported by more than 50 volunteers from across the industry. An additional 65 volunteers also offered to help.

"It built a momentum of its own," Catlin said.
"Every now and again there's a moment in time when this could happen. It's when the bridge is burning and people collectively get really concerned. Then all of a sudden, people think,

"In events like these, speed and time are of the essence. What matters is to have as prompt a payout as possible to make sure that businesses can be resilient and thrive again. This is why everyone coalesced around the idea of a parametric payout."

Renaud Guidée Axa

'We need to sort this out as an industry. Let's take off our corporate hats and work together to sort things out.'

"After 9/11 it happened. It happened with Equitas in the Lloyd's market. I think it's a realization that we're in trouble if we don't do something. And we have damaged our reputation as an industry, which we need to fix. You can't fix that with one business. The only way the industry fixes that is collectively. So I think there was an underlying common desire to do something."

Providing a solution that addresses the small-tomedium enterprise (SME) segment is critical for Pandemic Re.

"There's a recognition now—and it's always been the case—that 70% of the economy is SME. Its core, its foundation, is SME. If you wipe out the SME industry, it means the economic recovery is slower," Catlin said. "When you think about the economic consequences to the world, finding mechanisms for governments to fund their SME markets under these circumstances—that in itself, in my view, is significant added value.

"If we were to ignore SME in what we're offering to government, we wouldn't really be solving the problem at all. We would like to have a holistic solution that would include all types of businesses. But you're not adding value to the government if you don't deal with one of its biggest challenges."

While Pandemic Re is starting with a blank slate, Catlin said it seems logical to consider piggybacking on Pool Re, the U.K.'s terrorist pool.

"There is £6.6 billion of fund created by Pool Re, which is sitting there doing nothing, other than actually being available for a terrorist event," Catlin said. "To my way of thinking, that goes against the principles of insurance, which is you expose capital to lots of different types of losses, not just one. So it would seem logical to consider whether those funds could be applied elsewhere. And then if you go down that road, why wouldn't you have a Pool Re holding company, where Pool Re is a subsidiary, and maybe Pan Re, and maybe Cyber Re or down the line Climate Re."

UK Efforts

Liz Foster, nonexecutive director of The Society of Insurance Broking at the Chartered Insurance Institute, said an umbrella organization for extreme risks makes sense. She and James York, CEO of Insurtech UK, have spearheaded Totus Re with the aim of finding a solution for "red zone risks" on the U.K.'s National Risk Register.

"We have Flood Re, which was created retrospectively, like Pool Re and now Pandemic Re, to support communities where insurance wasn't in place," Foster said. "Totus Re is proactive. We're looking at those red zone risks in the National Risk Register and saying, 'Why wait for these to impact our society?'

"We see Totus Re as a beating heart, for want of a better expression, at the center with cells radiating from it. Each of those cells would hold one of these unique risks. Pandemic Re, Pool Re, Flood Re, and then Cyber Re, potentially, etc. Each of those cells would attract specialists in its own right. What they would have in common is the

Special Section Sponsored by:

Munich RE

format, the setup, the forethought, and the support base of insurance and the government."

When an event hits, Foster said, funds could be drawn from any of the cells.

"You have this total funding which, by government legislation, would be enabled to be used to meet any of the events," Foster said. "The U.K. insurance industry is a world leader in the market. We're well-versed in distributing funds and dealing with claims. But at the moment, we're on the back foot because pandemic wasn't a risk that was widely covered.

"Knowing that we have a National Risk Register which has categorized some of these risks into a red zone makes it such an important thing to address."

Lloyd's also has sought to address such risks. In July it announced three insurance and reinsurance frameworks—called ReStart, Recover Re and Black Swan Re—to tackle future COVID-19 losses and other catastrophic events. Recover Re and Black Swan Re require partnership between the insurance industry and government.

Recover Re is a proposed 'after the event' insurance product framework for providing nondamage business interruption coverage. It could be implemented in any country where the government has the resources and industry commitment to support it, Lloyd's said.

Black Swan Re is a reinsurance framework for a government and industry partnership that could better protect customers from the devastating and long-term impacts of systemic catastrophic events—from another pandemic, or global supply chain disruption, to the interruption of critical infrastructure or utilities. The framework would provide reinsurance for commercial nondamage business interruption cover for black swan events through industry pooled capital, backed by a government guarantee to pay out if ever the pool had insufficient funds.

ReStart is a potential new insurance solution that would offer business coverage for future waves of COVID-19 by pooling capacity from several Lloyd's market participants.

EU Initiatives

Catlin wasn't the only executive to use his platform to rally support. Axa CEO Thomas Buberl also took to the French press in April to encourage

his counterparts to work with governments to develop risk pooling schemes.

In the weeks following, French insurers worked to create a new program for exceptional catastrophes, CATEX (which is unrelated to the U.S. platform by the same name). Under the proposed scheme, insurers would provide €2 billion of coverage per year for small businesses obligated to close due to government mandate, with the government stepping in beyond that via state reinsurer CCR. The program is not limited to pandemic shutdowns.

"The benefit of the CATEX regime that has been proposed by the French industry is that it would indeed have a scope for categories of shutdown enacted by public authorities following either a pandemic, a riot, social unrest, or in relation to terrorism or a natural catastrophe," Axa's Guidée said. "You would have clear coverage for all of these triggers, so what we've been living through would fall in that scope."

The coverage would be built into either fire coverage, which is mandated for businesses, or business interruption coverage. And it would have a parametric element to it.

"What is to be parametric for sure is the payout, which should be paid as a pre-defined lump sum," Guidée said. "There has been a consensus among all stakeholders that if you want to have an indemnity that is tailored in a very granular fashion to the very euro of losses, it will take ages. You would need an army of accountants to go through the books of each and every impacted business. That's not practical.

"In events like these, speed and time are of the essence. What matters is to have as prompt a payout as possible to make sure that businesses can be resilient and thrive again. This is why everyone coalesced around the idea of a lump-sum payout to make things smoother and simpler in terms of implementation and the speed of the payout."

In Germany, a German Insurance Association working group also developed a private-public model that would mitigate future economic losses from pandemic "by partly replacing governmental ad hoc aid in case of a limited event."

The German Insurance Association examined two possible models in a research paper released in June. One is a "pure capital collecting entity that builds up a capital stock over time with flat-rate levies

"While we cannot rewrite history, we can work together to underwrite a better future—and we should start immediately."

David PriebeGuy Carpenter

and pays (largely flat-rate) benefits in the event of an infection wave." The capital size would be determined by how many days or weeks the system could provide aid before reserves are exhausted.

The second model is a "more risk-oriented system" based on the likelihood of a loss.

Businesses pay in for a specified loss to be compensated, so each business decides for itself on the amount of payout it would like to get in the event of "an infection wave," the paper said.

Businesses would pay a fee to a capital collecting entity that is based on a so-called return period, the paper said. Beneficiaries would be businesses that contributed to the capital stock of the system and that have been closed for general prevention like sanitary containment measures.

As with the French program, one of the key features would be a quick payout facilitated by the insurance industry.

"Our German colleagues haven't yet settled on something parametric, but they have found it would be very cumbersome and practically impossible to have accountants reviewing the bookkeeping of all these clients at the same time," Guidée said. "So I would say lump-sum payout will be done out of pragmatism."

U.S. Responses

The U.S. response originally had fallen into two buckets—one driven by government, the other driven by industry groups. Chubb blended elements of both initiatives to create a third option, which it announced last month.

In late May, Congresswoman Maloney introduced the Pandemic Risk Insurance Act of 2020 (PRIA), which would create the Pandemic Risk Reinsurance Program modeled on the Terrorism Risk Insurance Act.

Membership in the program would be voluntary, but participating carriers would be required to offer pandemic coverage in all their business interruption policies. The federal backstop will be triggered once a covered public health emergency accounts for aggregate business interruption losses of \$250 million. The PRRP would cover 95% of additional losses up to \$500 billion in a single year, with the remaining 5% spread among the insurers. There is a \$750 billion cap on federal compensation, with the Treasury secretary authorized to determine pro-rata share above that amount.

"Once that \$750 billion ceiling is reached, it appears that the industry is back on the hook, or at least Treasury is supposed to examine and make that determination," Eric Dinallo, insurance regulatory chair at Debevoise & Plimpton, told AMBestTV. "I would say that the industry is justifiably nervous or worried about that part of the proposal. There may be a debate about whether they go to a trillion-dollar ceiling to push them further away from having to be back on the hook, so to speak."

Insurers are also concerned about the broadening of coverage to all policies.

"An issue cited by insurers is that the proposed PRIA bill to broaden coverage in all existing insurance policies to cover pandemics would make it difficult, if not impossible for carriers to continue to offer current limits, even with a substantial governmental backstop, as pandemic coverage does not align with current property policy limits or claims practices," Guy Carpenter's Priebe said.

Industry trade groups countered with an alternative proposal—the Business Continuity

Munich RF

Protection Program. Devised by the National Association of Mutual Insurance Companies, the American Property Casualty Insurance Association and the Independent Insurance Agents & Brokers of America, the BCPP would provide business revenue replacement assistance that would reimburse up to 80% of payroll, benefits, and expenses for three months.

Businesses would purchase their desired level of revenue replacement assistance through state-regulated insurance entities. Participation would be voluntary, and the BCPP would be able to purchase private reinsurance.

"The BCPP proposal suggests a stand-alone pandemic policy would be a more effective approach to address the needs of business," Priebe said. "The BCPP would provide for fast claims payments, as relief would be automatically triggered and immediately paid following a presidential viral emergency declaration (i.e., no advance documentation or claims adjustment would be required). However, some insureds have voiced a concern that the BCPP approach is too limited, as it does not explicitly address event cancellation and other coverages included in PRIA."

The BCPP more closely follows the National Flood Insurance Program, in that insurers would get businesses to buy into it but the risk would fall solely on the government.

"Perhaps the answer lies somewhere in the middle, and we appreciate the carriers coming forward with a response," Priebe said. "Ultimately, the industry will need to come together with a unified response to address pandemic risk.

"If we create the right economic incentives for insurers, policyholders and the government, insurance can serve its traditional function of mitigating risk. Over time, the right risk program can spur new technologies, ways of working, services, insurance products and processes to ultimately chip away at the enormous losses associated with pandemics. That, in turn, can help make pandemic risk more manageable and enable our economy to build the necessary resilience it needs for the future."

Third Option

Chubb's Pandemic Business Interruption Program addresses the different needs of small and large businesses. It includes a \$750 billion program for small businesses that provides an immediate cash infusion when a pandemic is declared and a separate voluntary \$400 billion program for medium and large businesses, with losses paid through the industry's traditional claims-adjudication process.

"Both depend on the federal government assuming a substantial percentage of the risk, through direct U.S.Treasury funding to insurers for the small-business program, and through a newly created government-run reinsurance entity for medium- and large-business losses," Chubb said in a statement.

The small-business program contains parametric triggers and aims to keep people employed by covering up to three months of payroll and operating expenses. In order to maximize opt-in, it requires all insurers that write business insurance to offer the program, and businesses that decline coverage would be required to acknowledge they have no coverage for pandemic business losses and are ineligible for the government benefits program. The insurance industry would pay up to \$15 billion of first-dollar losses the first year, with that amount rising to \$30 billion over 20 years. The program has an aggregate limit of \$750 billion.

For medium and large businesses, Chubb proposed an indemnity-based program where insurers and government are paid an appropriate risk-adjusted rate for pandemic coverage. Insurers would retain a portion of the risk and cede the rest to a government reinsurance entity, which it refers to as Pandemic Re. Participation would be voluntary both for insurers and businesses, and policies would have a \$50 million limit. Insurers would collect premiums and pay claims, drawing down on a letter of credit from Pandemic Re for the government's portion. The total aggregate limit would be \$400 billion. The industry's share would be \$15 billion the first year, rising to \$30 billion by year 10.

The Chubb program excludes COVID-19 losses and would take effect in January 2021. BR

A Hard Reality

While loss creep from recent major catastrophes, inflation and other factors are tightening reinsurance capacity this year, the global COVID-19 pandemic could add another layer of challenges to the reinsurance market.

by Lori Chordas

ith forecasts of more than a dozen named storms hanging over the United States this year, some buyers of reinsurance wonder what rising catastrophe losses from those and other natural catastrophes could mean for the already hardening property catastrophe reinsurance market.

Current market conditions prompted some cedents to pull back on their reinsurance levels during 2020 midyear renewals, while others shed policies in high-risk areas or elected not to participate in a private reinsurance placement this year.

Mother Nature's wrath isn't the only concern in the market right now. The unprecedented COVID-19 pandemic has upended the economy worldwide and continues to take a toll on insurers and reinsurers.

Even prior to the onset of COVID-19, loss creep from recent major losses, falling interest rates, increased uncertainty around casualty reserving and ongoing disruption in the retrocession market were expected to drive a modest tightening of reinsurance capacity as 2020 progressed, said Mike Van Slooten, head of business intelligence for Aon's Reinsurance Solutions business.

Now the "confluence of new headwinds associated with the pandemic," including a global recession, even lower interest rates and investment returns, and higher costs of capital have added to the challenges facing insurers and "entrenched positions further,"

Lori Chordas is a senior associate editor. She can be reached at *lori.chordas@ambest.com*.

Key Points

Winds of Changes: Catastrophe losses from the past several years have contributed to hardening conditions in the reinsurance market.

Finding Shelter: Some insurers have pulled back on their reinsurance purchases or their risk transfer programs during recent renewals.

The Aftermath: It's still too early to tell what effect COVID-19 will have on the reinsurance market and what that will mean for reinsurance buyers.

Similar to 2019, TWIA this year has access to \$4.2 billion to handle storm claims through a combination of catastrophe bonds and traditional reinsurance.

John Polak

Texas Windstorm Insurance Association

Guy Carpenter reported in a June 23 GC Capital Ideas blog post.

Fallout from the Storm

So far the global pandemic hasn't significantly slowed down the issuance of catastrophe bonds and other insurance-linked securities, according to data from the Artemis Deal Directory.

By midyear, data shows, total cat bond and ILS market volume stood at \$41.8 billion.

Also during that time, issuers had brought more than \$6 billion to the market, including a record first quarter with more than \$5 billion issued through 27 transactions, according to Artemis data.

But by the second quarter, new issuance slowed slightly to about \$1.06 billion as of mid-May and, Artemis reported, COVID-19 was a factor in several deals being pulled.

While effects of the pandemic continue to unfold, the coronavirus, along with other factors, had a hand in the tightening of deployable capital among traditional and alternative markets at June 1 renewal, along with significantly slowing down third-party capital inflows into collateralized reinsurance and sidecar vehicles "as investors assess the uncertainty associated with COVID-19 and prepare for the possibility of further trapped capital," Guy Carpenter noted in the June post.

Even before the pandemic hit, a prolonged period of uncertainty in the reinsurance market had forced insurers and reinsurers to reevaluate pricing adequacy and risk exposures, especially in catastrophe-prone areas.

Years of successive losses, concerns over assignment of benefits issues, climate change and sustained prior-year hurricane loss creep have altered reinsurers' views and appetites for peak zone exposures, according to Guy Carpenter in its June 23 blog post.

Reinsurance buyers, too, have responded to those concerns with modifications to their reinsurance levels or risk transfer programs, especially among Florida-domiciled insurers hard hit by a recent succession of destructive storms.

In 2017 and 2018, following a 12-year reprieve, the Sunshine State was the target of 32 named storms, including mammoth hurricanes Irma and Michael. Insured losses from the two storms, much of which occurred in Florida, could fall in the range of \$34 billion to \$42 billion, according to estimates from the Insurance Information Institute.

"Unprecedented circumstances like the creep from Irma is something this marketplace has never seen or experienced before," said Jim Graganella, president and CEO of Capitol Preferred, Southern Fidelity Insurance Co. and Preferred Managing Agency.

Along with losses from years-old events like Irma, he said, "fraud and abuse by attorneys, roofers and water mitigation companies" has created a domino effect in the primary and retrocession reinsurance markets, reducing reinsurance capacity and driving up rates for policyholders.

In June, reinsurance renewal pricing in Florida climbed, on average, 20% or higher on a broad basis, "but much more in individual cases where cedents have faced stress, underperformed or come under pressure in recent years," according to Artemis.

Rising rates was the impetus behind Capitol Preferred's decision to shed 23,800 policies in the state this year in an effort to "reduce loss ratio and reinsurance exposure" and head off a financially

Staying ahead of the curve is difficult in any industry. With advanced data, technology, and know-how, you can be successful in creating the risk solutions of the future. We're here to do that with you.

Learn how at munichreus.ly/risk

hazardous condition following years of heavy losses, including a \$25.7 million loss in 2019, Graganella said.

Tightening conditions in the property catastrophe reinsurance market caused Florida's property insurer of last resort, Citizens Property Insurance Corp., to rethink its reinsurance plan this year and eventually led to its decision to withdraw a layer of its latest issuance from the catastrophe bond market during midyear renewals.

Company spokesman Michael Peltier said Florida Citizens' decision to drop a \$200 million tranche from its 2020 Everglades Re II Ltd. series from the Coastal Account was based on "a pricing issue" and the company "was not willing to pay asking price for that coverage."

He also pins rising prices in the reinsurance market on causing the company to slightly scale back the amount of new reinsurance coverage purchased for the 2020 catastrophe season.

Earlier in the year, Florida Citizens, whose risk transfer package includes a balance of traditional reinsurance and protection through the cat bond markets, announced plans to purchase up to \$1.3 billion in new reinsurance coverage to augment \$400 million in existing coverage, for a total of \$1.7 billion in coverage, Peltier said.

But current dislocation in the reinsurance markets, significant price increases and the company's decision "not to chase the market and not to lock in the currently elevated rates on a multiyear basis" led to its final decision to "only place a cost efficient risk transfer program of \$1.02 billion, which includes \$620 million of new placement and the \$400 million of multiyear coverage from 2018," Florida Citizens chief financial officer Jennifer Montero told members of the board during a spring meeting.

Despite the slight dip in property catastrophe reinsurance coverage this year, "we are fortunate to be sitting in a very financially sound position. So we're able to reduce our risk transfer purchases from this year while still being able to weather the most severe storms, including a one-in-100-year event," Peltier said.

Feeling the Effects

While Florida has been hit by a number of recordbreaking natural catastrophes over the past several years, states like Louisiana have been enjoying a recent reprieve from those high-loss-generating calamities.

But despite the current calm in the state, Louisiana Citizens Property Insurance CEO Richard Newberry said losses in other geographies like Florida are having a big impact on his organization's reinsurance program.

"The cyclical and global nature of the reinsurance market is driving up reinsurers' cost of capital and bringing higher reinsurance costs for all purchasers of property catastrophe reinsurance, even if they weren't impacted by the loss," he said.

During June 1 renewals, Louisiana Citizens was able to fully place its program at a single digit risk-adjusted price increase, Newberry said, "with the only notable change to terms and conditions being the insertion of a communicable disease exclusion in response to COVID."

Several years ago, Louisiana Citizens diversified its capital sources by incorporating cat bond capacity into its program, starting with a Pelican Re Ltd. Series 2012-1 cat bond issued in 2012, which, he noted, paid a coupon of 13.73%.

Since then, the Louisiana property insurer of last resort has added other forms of capital markets capacity into its program, thereby reducing its pricing and capacity volatility by allowing the company "to annually place capacity with the most efficient capital source each year," Newberry said. "The benefit of our diversification approach was amplified by this renewal's market conditions and our need to shift course among these capacity sources several times in the process."

Like Louisiana, Texas is also coming off a relatively quiet catastrophe season in 2019.

This year, the Texas Windstorm Insurance Association's catastrophe funding levels will remain unchanged or steady, said general manager John Polak.

Similar to 2019,TWIA this year has access to \$4.2 billion to handle storm claims through a combination of catastrophe bonds and traditional reinsurance, he said.

At the end of last year, TWIA's board voted to assess member insurance companies an additional \$90 million based on losses from Hurricane Harvey, in 2017, and voted to defer further consideration of action regarding TWIA insurance rates on residential and commercial policies until its next statutorily required rate filing, which is scheduled for this month.

TWIA said the assessment of member insurance companies is in addition to the \$282 million already assessed, and is based on an updated loss estimate for Harvey of \$1.7 billion.

Now added to the list of impending concerns are questions about how events like COVID-19 will factor into future reinsurance renewals.

Richard Newberry Louisiana Citizens Property Insurance

Market Conditions

So far this year, COVID-19 has "already undermined earnings for 2020" and is adding a "whole new layer of uncertainty," Aon's Van Slooten said.

As a result, he said, the tightening has been accelerated and reinsurers are being much more discerning about how they are allocating their capacity.

Since 2015, the Florida Hurricane Catastrophe Fund, which provides reimbursements to insurers for a portion of their catastrophic hurricane losses, "has had the benefit of participating in the reinsurance market without reducing the amount of capacity available to direct writers in the state's market thanks to an abundance of private capital and significant risk transfer capacity," said John Kuczwanski, a spokesman for Florida's State Board of Administration, which oversees the state hurricane catastrophe fund.

But now limited availability of capital in the market is ushering in some big changes and causing organizations like the Florida Hurricane Catastrophe Fund to opt not to participate in a private reinsurance placement this year.

The good news, Kuczwanski noted, is that the Florida Hurricane Catastrophe Fund is "financially strong" with \$12.3 billion in liquid resources available to pay claims for this year's hurricane season.

"Also, those resources will allow the Fund to seek other opportunities to optimize its capital structure and maximize its claims-paying capacity," he said.

Despite continued tightening of the property catastrophe reinsurance market and the outbreak of unprecedented global events, AM Best maintains its outlook for the global reinsurance market as stable.

In its April 3 Best's Market Segment Report, AM Best said it expects third-party capital to continue to grow, albeit at a tempered pace, "following a period of high frequency and severity of losses, owing to the improving but relatively anemic pricing environment."

Also, authors of the report noted that although market conditions have "seemingly begun to improve," looming concerns remain, including insufficient rate adequacy relating to certain U.S. casualty lines, a steady decline in the benefit of favorable reserve releases and the pervasive low interest rate environment.

Now added to the list of impending concerns are questions about how events like COVID-19 will factor into future reinsurance renewals, said Newberry of Louisiana Citizens.

Even before COVID-19, he said, "market conditions were already changing. But when you add a true black swan event to the equation then that really strains the renewal placement process. And we have to react to these events in real-time, with only days or weeks to respond and change course on a renewal strategy that had been in place for months."

Despite the pandemic, along with staggering global economic market conditions and other potential concerns, Florida Citizens' Peltier expects a "calming" of the reinsurance market by year's end, the result of which he hopes will favorably impact future reinsurance purchases.

"With current market conditions, we chose not to take any multiyear coverage this year with anticipation of things calming down with the various things going on now in the market and with COVID," he said.

"Now we're allowing ourselves to take a breath. We think rates will soon become a bit more reasonable, and then we'll be able to carry on from that point," Peltier said.

Headwinds Emerge

India's nonlife insurance market is challenged by an unhealthy reliance on unrealized and realized gains from investment holdings, poor pricing discipline and economic fallout from the pandemic.

by John Weber

ver the past several years, India has been one of the fastest growing economies in the world, and with that, the nation's nonlife insurance market has significantly expanded across both personal and commercial lines. Despite that, AM Best's outlook for the sector is negative.

Myles Gould, director of analytics, and Senior Financial Analyst Yuan Tian discussed the Best's Market Segment Report on the nonlife India market with AMBestTV.

The following is an edited version of the transcript.

Following the recent release of India's nonlife market segment outlook, what are the key factors that are driving the negative outlook?

Gould: Key factors underpinning the negative outlook on the India nonlife market include the competitive market conditions that we observed in core lines of business along with the poor pricing discipline. Furthermore, we observed there to be an unhealthy reliance on unrealized and realized gains from investment holdings, particularly emanating from typically high-risk investment strategies.

In addition, a more recent dynamic that we've observed in the Indian nonlife market is that of the global COVID-19 pandemic, which we expect to result in a level of volatility in both top-line and bottom-line results of Indian nonlife insurance.

Finally, over the medium-term we expect there to be a level of disruption formed by the planned restructuring of several state-owned insurers in this market.

John Weber is a senior associate editor, ^{AM}BestTV. He can be reached at *john.weber@ambest.com*.

What are the key drivers of the poor underwriting performance for core lines of business?

Tian: Motor, health and crop insurance are the largest lines of business in the nonlife India insurance market. They collectively accounted for over 80% of the total premium.

Let's start with motor. Motor class is comprised of own damage and third-party liability. Third-party liability is a compulsory insurance product in India, and the price is set by the tariffs that are prescribed by the regulator.

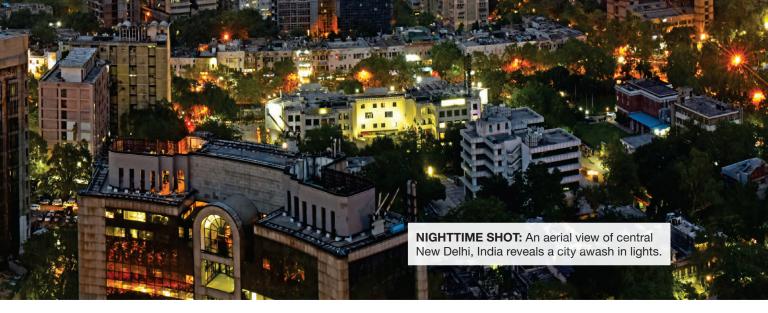

There is a combination of key drivers for the poor performance in this line of business including inadequate pricing, unlimited liability provided by the product, and also an absence of a time bar for policyholders to make claims. The line is an extremely long-tailed product.

For the own damage, we have observed that the duration and the loss ratio over recent years are due to strong market competition.

Health insurance is the second-largest line of business. The line has been growing very fast over the last few years. The business has been dominated by the public-sector companies, however the market share has been cut by the private companies as well as the stand-alone companies.

Within the health segment, corporate health insurers compared to retail health insurance have not been performing very well. There's a new health scheme introduced by the government in 2020, and it's uncertain how this product is going to perform. However, we expect a strong growth in this line of business.

For the crop insurance, due to lack of experience and a lack of historical data since the new scheme was introduced in 2016, the loss ratio has been quite volatile in this line. It's also driven by weather conditions, and we have observed severe weather

conditions over the last few years in the India market, for example, the drought in 2018.

In 2020, several private insurers have dropped out from this business and ceased writing crop insurance.

What are the key observations on the investment earnings of nonlife insurers in India and why is there an imbalance in operating results?

Tian: The market has been experiencing losses on the underwriting side so the insurance companies in this market have been relying on the investment returns to generate overall positive operating earnings. The companies have been investing in high-risk asset classes such as equity, low-quality fixed income, and real estate assets.

Those asset classes have been generating quite good returns to the companies over the past many years. The stock market in India has been growing and generating annualized year-on-year return of around 15% over the last 15 years up to the end of 2019. However, we view this business model as extremely risky.

We've seen during the pandemic in 2020 that the stock market has been falling by over 20% in quarter one. This has impacted the capital position and overwrote earnings to nonlife insurers in the market.

How is the pandemic impacting nonlife insurers?

Gould: Aside from investment market volatility borne by the COVID-19 environment, we expect India nonlife insurers to face other challenges with their business related to the pandemic. Most recently we've observed mandatory periods of lockdown in the country, which has impacted the agency distribution, which is prevalent in this market.

As a result of this, whilst AM Best expects premium growth to still be positive and one with an upward

trajectory over the medium term, at least over the near term we expect there to be a level of volatility with slow and lumpy premium growth as compared with previous years.

In addition, we expect the COVID-19 environment to result in underwriting performance, which is already pressured, to be further exacerbated by this dynamic. In particular we would expect pressures to arise on COVID-19 exposed lines of business such as that of health and medical.

Finally, we would expect premium receivables and day-to-days to be on the minds of insurance company management over the medium term as a result of the economic disruption in the country and people with the potential inability to settle their premium payments when due.

Can you summarize the prospective challenges for nonlife insurers in India over the medium term?

Tian: We expect nonlife India insurers to face many headwinds in the market over the medium term. Those include strong market competition, the change of market dynamics driven by potential mergers and acquisitions, volatility in investment earnings, and also the slowing down of domestic and global economic growth.

Some of those challenges and uncertainties have been exacerbated by the COVID-19 pandemic. We expect the underwriting investment and the financial conditions to remain challenging over the medium term in the market.

COVID-19 **And Creativity**

Hockey and lacrosse equipment factories are making face shields. a group raises funds for children

affected by the coronavirus, students gain 'real-world' experience in dealing with a pandemic and the growth of telemedicine has its risks. AMBestTV and AMBestAudio report on stories from a number of sectors within the insurance industry.

On Demand

Insurance Coverage Helped a Hockey Equipment Factory Pivot to Make PPEs

Zurich Canada expanded client Bauer Hockey's liability coverage so its hockey and lacrosse equipment factories could make face shields needed during the COVID-19 pandemic. Making that change on the factory floor also meant shifting liabilities and insurance coverage. Larry Weber, Bauer Hockey risk manager, spoke about the transition, and Matthew Arbuckle, casualty underwriting specialist with Zurich, addressed how this switch in product impacted the company's insurance.

Saint Joseph's University Students: **Spencer RIMS Challenge Provides** A 'Real World' Experience

student team A from St. Joseph's University took first place for a secondstraight year in the Spencer RIMS Risk Management Challenge that gave them a chance to examine real risks, including COVID-19 and

active shooters. Marya Propis, Spencer Chair, SVP of Distribution & Broker Partnerships at All Risks Ltd., explains what the students of the 23 universities participating in the competition were asked to do.

IICF Raises \$1 Million To Help Children in Pandemic

loyd's donated ■\$500,000 to COVID-19 Crisis: IICF Children's Relief Fund, said Hank Watkins. president of Lloyd's Americas, and board member, Insurance Industry Charitable Foundation's Northeast Division. The fund recently passed the \$1 million mark.

BEST'S FINANCIAL STRENGTH RATING GUIDE - (FSR)

A Best's Financial Strength Rating (FSR) is an independent opinion of an insurer's financial strength and ability to meet its ongoing insurance policy and contract obligations. An FSR is not assigned to specific insurance policies or contracts and does not address any other risk, including, but not limited to, an insurer's claims-payment policies or procedures; the ability of the insurer to dispute or deny claims payment on grounds of misrepresentation or fraud; or any specific liability contractually borne by the policy or contract holder. An FSR is not a recommendation to purchase, hold or terminate any insurance policy, contract or any other financial obligation issued by an insurer, nor does it address the suitability of any particular policy or contract for a specific purpose or purchaser. In addition, an FSR may be displayed with a rating identifier, modifier or affiliation code that denotes a unique aspect of the opinion.

Best's Fin	ancial Str	ength Rati	ng (FSR) Scale
Rating Categories	Rating Symbols	Rating Notches*	Category Definitions
Superior	A+	A++	Assigned to insurance companies that have, in our opinion, a superior ability to meet their ongoing insurance obligations.
Excellent	А	A-	Assigned to insurance companies that have, in our opinion, an excellent ability to meet their ongoing insurance obligations.
Good	B+	B++	Assigned to insurance companies that have, in our opinion, a good ability to meet their ongoing insurance obligations.
Fair	В	B-	Assigned to insurance companies that have, in our opinion, a fair ability to meet their ongoing insurance obligations. Financial strength is vulnerable to adverse changes in underwriting and economic conditions.
Marginal	C+	C++	Assigned to insurance companies that have, in our opinion, a marginal ability to meet their ongoing insurance obligations. Financial strength is vulnerable to adverse changes in underwriting and economic conditions.
Weak	С	C-	Assigned to insurance companies that have, in our opinion, a weak ability to meet their ongoing insurance obligations. Financial strength is very vulnerable to adverse changes in underwriting and economic conditions.
Poor	D	-	Assigned to insurance companies that have, in our opinion, a poor ability to meet their ongoing insurance obligations. Financial strength is extremely vulnerable to adverse changes in underwriting and economic conditions.

^{*} Each Best's Financial Strength Rating Category from "A+" to "C" includes a Rating Notch to reflect a gradation of financial strength within the category. A Rating Notch is expressed with either a second plus "+" or a minus "-".

Financial S	Strength Non-Rating Designations
Designation Symbols	Designation Definitions
Е	Status assigned to insurers that are publicly placed, via court order into conservation or rehabilitation, or the international equivalent, or in the absence of a court order, clear regulatory action has been taken to delay or otherwise limit policyholder payments.
F	Status assigned to insurers that are publicly placed via court order into liquidation after a finding of insolvency, or the international equivalent.
S	Status assigned to rated insurance companies to suspend the outstanding FSR when sudden and significant events impact operations and rating implications cannot be evaluated due to a lack of timely or adequate information; or in cases where continued maintenance of the previously published rating opinion is in violation of evolving regulatory requirements.
NR	Status assigned to insurance companies that are not rated; may include previously rated insurance companies or insurance companies that have never been rated by AM Best.

Rating Disclosure – Use and Limitations

A Best's Credit Rating (BCR) is a forward-looking independent and objective opinion regarding an insurer's, issuer's or financial obligation's relative creditworthiness. The opinion represents a comprehensive analysis consisting of a quantitative and qualitative and qualitative opinion as of the date it is released, it cannot be considered as a fact or guarantee of future credit quality and therefore cannot be described as accurate or inaccurate. A BCR is a relative measure of risk that implies credit quality and is assigned using a scale with a defined population of categories and notches. Entities or obligations assigned the same BCR symbol developed using the same scale, should not be viewed as completely identical in terms of credit quality. Alternatively, they are allke in category (or notches within a category), but given there is a prescribed progression of categories (and notches) used in assigning the ratings of a much larger population of entities or obligations, the categories (notches) cannot mirror the precise subtleties of risk that are inherent within similarly rated entities or obligations. While a BCR reflects the opinion of A.M. Best Rating Services, Inc. (AM Best) of relative creditworthiness, it is not an indicator or predictor of defined impairment or default probability with respect to any specific insurer, issuer or financial obligation. A BCR is not investment advice, nor should it be construed as a consulting or advisory service, as such; it is not intended to be utilized as a recommendation to purchase, hold or terminate any insurance policy, contract, security or any other financial obligation, nor does it address the suitability of any particular policy or contract for a specific purpose or purchaser. Users of a BCR should not rely on it in making any investment decision; however, if used, the BCR must be considered as only one factor. Users must make their own evaluation of each investment decision. A BCR opinion is provided on an "as is" basis without any expressed or implied warra

Financial Size Category

To enhance the usefulness of ratings, AM Best assigns each rated (A++ through D) insurance company a Financial Size Category (FSC). The FSC is based on adjusted policyholders' surplus (PHS) in U.S. dollars and may be impacted by foreign currency fluctuations. The FSC is designed to provide a convenient indicator of the size of a company in terms of its statutory surplus and related accounts.

Many insurance buyers only want to consider buying insurance coverage from companies that they believe have sufficient financial capacity to provide the necessary policy limits to insure their risks. Although companies utilize reinsurance to reduce their net retention on the policy limits they underwrite, many buyers still feel more comfortable buying from companies perceived to have greater financial capacity.

Class	Adj. PHS (\$ Millions)	Class
1	Less than 1	IX
II	1 to 2	Χ
III	2 to 5	XI
IV	5 to 10	XII
V	10 to 25	XIII
VI	25 to 50	XIV
VII	50 to 100	XV
VIII	100 to 250	

Class	Adj. PHS (\$ Millions)
IX	250 to 500
Χ	500 to 750
XI	750 to 1,000
XII	1,000 to 1,250
XIII	1,250 to 1,500
XIV	1,500 to 2,000
XV	2,000 or greater

For the most current version, visit www.ambest.com/ratings/index.html. BCRs are distributed via the AM Best website at www.ambest.com. For additional information regarding the development of a BCR and other rating-related information and definitions, including outlooks, modifiers, identifiers and affiliation codes, please refer to the report titled "Guide to Best's Credit Ratings" available at no charge on the AM Best website. GUIDE TO BEST'S ISSUER CREDIT RATINGS - (ICR)

A Best's Issuer Credit Rating (ICR) is an independent opinion of an entity's ability to meet its ongoing financial obligations and can be issued on either a long- or short-term basis. A Long-Term ICR is an opinion of an entity's ability to meet its ongoing financial obligations with original maturities generally less than one year. An ICR is an opinion regarding the relative future credit is of an entity. Credit risk is the risk that an entity may not meet its contractual financial obligations as they come due. An ICR does not address any other risk. In addition, an ICR is not a recommendation to buy, sell or hold any securities, contracts or any other financial obligations, nor does it address the suitability of any particular financial obligation for a specific purpose or purchaser. An ICR may be displayed with a rating identifier or modifier that denotes a unique aspect of the opinion.

Designation Symbols	Designation Definitions
d	Status assigned to entities (excluding insurers) that are in default or when a bankruptcy petition or similar action has been filed and made public.
е	Status assigned to insurers that are publicly placed, via court order into conservation or rehabilitation, or the international equivalent, or in the absence of a court order, clear regulatory action has been taken to delay or otherwise limit policyholder payments.
f	Status assigned to insurers that are publicly placed via court order into liquidation after a finding of insolvency, or the international equivalent.
S	Status assigned to rated entities to suspend the outstanding ICR when sudden and significant events impact operations and rating implications cannot be evaluated due to a lack of timely or adequate information; or in cases where continued maintenance of the previously published rating opinion is in violation of evolving regulatory requirements.
nr	Status assigned to entities that are not rated; may include previously rated entities or entities that have never been rated by AM Best.

Rating Disclosure: Use and Limitations

A Best's Credit Rating (BCR) is a forward-looking independent and objective opinion regarding an insurer's, issuer's or financial obligation's relative creditworthiness. The opinion represents a comprehensive analysis consisting of a quantitative and qualitative evaluation of balance sheet strength, operating performance, business profile and enterprise risk management or, where appropriate, the specific nature and details of a security. Because a BCR is a forward-looking opinion as of the date it is released, it cannot be considered as a fact or guarantee of future credit quality and therefore cannot be described as accurate or inaccurate. A BCR is a relative measure of risk that implies credit quality and is assigned using a scale with a defined population of categories and notches. Entities or obligations assigned the same BCR symbol developed using the same scale, should not be viewed as completely identical in terms of credit quality. Alternatively, they are alike in category for notches within a category), but given there is a prescribed progression of categories (and notches) used in assigning the ratings of a much larger population of entities or obligations, the categories (notches) cannot mirror the precise subtleties of risk that are inherent within similarly rated entities or obligations. While a BCR reflects the opinion of A.M. Best Rating Services, Inc. (AM Best) of relative creditworthiness, it is not an indicator or predictor of defined impairment or default probability with respect to any specific insurer, issuer or financial obligation. A BCR is not investment advice, nor should it be construed as a consulting or advisory service, as such; it is not intended to be utilized as a recommendation to purchase, hold or terminate any insurance policy, contract, security or any other financial obligation, nor does it address the suitability of any particular policy or contract for a specific purpose or purchaser. Users of a BCR should not rely on it in making any investment decision; however, if used,

Mid-Continent Excess and Surplus Insurance Co. (AMB# 014150), Cincinnati. This company redomesticated to Ohio from Delaware on Feb. 18, 2020.

Pennsylvania Insurance Co. (AMB# 022134), Santa Fe, N.M. This company redomesticated to New Mexico from Iowa on Jan. 4, 2020.

New Company Buzzes In

Hudson Structured Capital Management creates new special purpose insurer—Bumblebee Re.

douard von Herberstein, chief executive officer for Bumblebee Re and chief underwriting officer for Hudson Structured Capital Management, said the new special purpose insurer is transforming reinsurance risk by creating a system of collateralized cells.

Following is an edited transcript of the interview.

Can you tell us about your new insurer, Bumblebee Re?

We have been transforming reinsurance contracts for about four years now, since we started Hudson, using Offshore Re license.

We also have a team in Bermuda, and we've been ramping up not just the deal count and the number of contracts that we transform, but also broadening the variety of lines of business we transform through the Offshore Re license.

As that has grown in size and deal count, it became interesting and worth exploring having our own license to increase the control that we have on the transforming of those contracts.

We think that, over time, this will probably save some cost for investors as well as we are doing some of that transforming and servicing in-house.

What types of contracts are you transforming?

We are transforming many of what other ILS [insurance-linked securities] funds would transform as well, starting with property reinsurance and property retrocession, catastrophe, natural disaster-focused contracts.

We have a mandate that's very broad, so we have transformed deals not just across natural disaster risk transactions, but also in the casualty space, in the specialty space. In casualty, we've transformed cyber insurance contracts and reinsurance contracts.

We've transformed auto contracts, personal auto and commercial auto, and in specialty lines we have been active in the marine and energy space as well. We are in the process of transforming a financial guarantee product at the moment.

The license itself is not that flexible. It's a very basic, unrestricted special purpose insurer, which allows us to create cells that will effectively allow us

Edouard von Herberstein

to segregate investments to that specific contract for investors.

It has to be fully collateralized. We are not allowed to hedge or reduce our liability through hedging and reinsuring that risk. It's a fairly simple construct. It has some fairly strict constraints in terms of what we can and cannot do.

Does the segregated cell idea tie into the name, Bumblebee Re?

We ran a questionnaire with the team, and we asked people to provide suggestions. Two of our younger employees suggested Bumblebee, because Bumblebee is a Transformer in

the movie. That was No. 1.

Then quickly we realized that maybe using a Bumblebee was also a good analogy to those honeycomb cells that honeybees, but also bumblebees, use to store the nectar and make honey. To replace honey with cash, that works quite well.

I think Bumble is a dating app, and we like to think that we can date a lot of insurance companies and reinsurers around the world, and have dating relationships across a wide variety of cedents.

Is demand for collateralized reinsurance growing in the market today?

Because our mandate is very broad, what we are seeing is we get requests and opportunities that are initially defined for the traditional reinsurance market or insurance market. Often, because the traditional market doesn't provide the capacity for such risk of some specific structures, if we can, we'll find a way to use our mandate and our collateralized products and capacity to support, to take on that risk.

It doesn't come to us as a collateralized reinsurance product request. It comes in the form of a traditional product request. Because we don't have a rated balance sheet, we effectively guide the brokers and the clients to all the collateralized reinsurance solutions.

Comeback on the Way

Swiss Re: Global insurance market should recover in 2021 from COVID-19 pandemic shock.

nsurance demand will fall this year as the COVID-19 pandemic creates the deepest recession since the 1930s, but premium growth should recover in 2021, led by emerging markets and commercial property/casualty lines, according to Swiss Re.

Global gross domestic product will contract by about 4% in 2020, leading to a slump in demand for insurance this year, particularly for life insurance, said Swiss Re in a new sigma report. The reinsurer said life premium volumes will shrink by 6% in life and by 0.1% for nonlife insurance.

Citing ongoing uncertainty around the claims burden from COVID-19, the report said a range of current estimates "is very wide," with a midpoint estimate of \$55 billion for global COVID-19-related property/casualty losses "from a collection of sources."

Before COVID-19, the insurance industry was well-capitalized "and we believe it will absorb the COVID-19 earnings shock," the report said.

"The industry's capital position means it should be able to handle the COVID-19 shock," said Jerome Jean Haegeli, group chief economist, Swiss Re, in a statement.

"The upper end of the range of total property and casualty claims estimates by most external insurance analysis is \$100 billion, similar in scale to losses caused by hurricanes Harvey, Irma and Maria in 2017, which the industry also absorbed."

Swiss Re said the industry should "ride out what will likely be a short-lived recession, and for premium growth to bounce back as the economy enters more protracted recovery."

"The insurance industry is showing resilience in face of the COVID-19-led economic downturn," said Haegeli. "The magnitude of premium losses will be similar to that seen during the global financial crisis in 2008-09, even though this year's economic contraction of around 4% will be much more severe."

The reinsurer sees commercial property/casualty lines "as the main driver of the comeback," the report said.

By region, emerging markets will lead the comeback, particularly China, the report said.

Jerome Jean Haegeli

"Against this background, and with Asian countries expected to recover more quickly, we believe the ongoing shift in global insurance market opportunity to emerging Asia and China in particular, will continue," the report said.

"We forecast that China's share of global premiums will continue to rise rapidly to an estimated 18% (from 2019's 10%) in 2030, still only half the share of the U.S."

Excluding medical insurance premiums, Swiss Re said China "remains on track to become the largest insurance market globally by

the mid-2030s.

By then India, another emerging giant, will

By then India, another emerging giant, will also be among the 10 largest insurance markets of the world."

Swiss Re is estimating COVID-19 will hit global premium growth—both life and nonlife—by about three percentage points from its prerecession growth.

"We forecast that combined life and nonlife direct premiums written will recover to above pre-pandemic levels over the course of 2021, a strong outcome given the severity of this year's recession," the report said. "In relative terms, the declines in life and nonlife premium growth in 2020 will be of similar magnitude to that seen during the global financial crisis in 2008-09, even though this year's GDP contraction will be much more severe."

Falling sales and fee income due to restricted in-person interactions will affect life segment profit this year.

"On the flipside, COVID-19 has hit at a time of rate hardening in nonlife, and we expect that trend to continue in commercial lines in particular, as capital becomes more scarce," the report said. "This, and the expected bounce-back of insurance demand should support earnings over the longer term."

Haegeli said COVID "is a lesson for insurers and policymakers alike who, in the interest of long-term societal and economic stability, should look to develop more public-private partnership solutions for pandemic risks."

—David Pilla

A Big Drop

Willis Towers Watson: North America hit by slowing mergers and acquisition deals amid COVID-19 disruption.

ergers and acquisitions volume in North America fell to its lowest level in more than a decade over the first half of 2020, dragged down by the COVID-19 pandemic, said Willis Towers Watson.

Europe and Asia-Pacific escaped the worst of the virus-related slump, the broker said in a statement on the release of its Quarterly Deal Performance Monitor.

WTW said the COVID-19 impact on M&A performance and volume in the first half of 2020 "was significant but not unexpected," but the broker said regional differences in deal performance and volume from its M&A data "have been more dramatic."

"Economic uncertainty caused by the pandemic seems to have had a far greater negative impact on the ability of U.S. companies to initiate and successfully complete M&A negotiations," said Jana Mercereau, head of corporate mergers and acquisitions, Great Britain, WTW, in a statement. "Global M&A activity tumbled to its lowest level in more than a decade in the wake of the COVID-19 outbreak, with most of this decline driven by North America."

Based on share price performance, WTW said its quarterly monitor shows that North America saw the sharpest fall in M&A performance. "Acquirers underperformed their regional index by -7.2 percentage points" with only 137 deals completed in the first half, WTW said. This compared with 188 deals in the same period a year earlier.

"This is the lowest number of North American deals for a six-month period since 2009," WTW said.

WTW said European buyers performed 10.2 percentage points above their regional index in the first half, based on an increase in deals completed (80 deals compared with 68 a year earlier).

"This is also the first time in two years that Europe has recorded three consecutive quarters of positive performance," WTW said. "Meanwhile, U.K. acquirers performed 16.9 percentage points above the index with 15 deals in the first half of this year."

WTW said Asia-Pacific dealmakers saw a "more modest" 3.1 percentage point rise in the first half on lower volume of 82 deals compared to 95 a year earlier. "Perhaps more significantly, the region's outperformance in the last three months improved substantially at +8.0 percentage points based on 41 deals closed—the region's first significant positive quarterly performance since late 2016,"WTW said.

The quarterly monitor showed that deals took longer as the average time to close a deal in the first half of 2020 increased 8%, from 144 to 156 days, from the previous year, said WTW. "This trend is likely to endure, with M&A deals continuing to be delayed or canceled as companies try to wait out the worst of the downturn," WTW said.

The quarterly monitor "covers all M&A transactions globally valued at \$100 million or more across all industries, sectors and geographies," WTW said in an email.

Travel Alert

As travel plans start to rebound after COVID-19 largely upended the travel industry, travel insurers are optimistic about the future of their market. by Lori Chordas

he once bustling hallways inside airports across the world sat empty as only a handful of travelers made their way to the gates. Cruise ships docked in their ports while bus terminals once overrun with a frenzy of passengers awaiting their next charter resembled a ghost town scene out of a Hollywood Western.

COVID-19 upended travel plans and largely shuttered an industry that last year saw more than \$1.1 trillion in travel sales in the U.S.

While the unprecedented pandemic has resulted

in the loss of millions of travel sector jobs and, according to a June 18 report by Tourism Economics, fueled more than \$237 billion in cumulative losses for the U.S. travel economy since the beginning of March, it hasn't dampened the spirits of travel insurers.

Many expect a resurgence in travel plans and insurance policies to protect those trips in the coming months as travel restrictions imposed during the global pandemic continue to be lifted.

"The travel industry in the past has shown itself to be very resilient," said Allianz Global Assistance USA spokesperson Daniel Durazo.

"While sales of travel insurance products have largely been paused while Americans stay home due to COVID-19, travel plans and travel insurance sales will continue to rebound in the second half of 2020," he said.

Projections like that are already playing out in the numbers. According to a June 15 Travel Intentions Pulse Survey conducted by MMGY Travel Intelligence, about 40% of respondents expect to travel during the next six months.

Lori Chordas is a senior associate editor. She can be reached at lori.chordas@ambest.com.

While COVID-19 suspended travel plans, it also raised concerns by consumers who feared their travel insurance policies wouldn't help recover the cost of canceled trips.

Standard policies typically exclude coverage for pandemics. However, some insurers made temporary changes to their coverages.

Allianz Global Assistance USA made several temporary accommodations to provide coverage for trip cancellations, trip interruptions and emergency medical care for policyholders who become ill

> with COVID-19, in addition to extending refunds of travel insurance premiums to customers whose travel suppliers have canceled their trips due to the pandemic.

Allianz is also allowing customers to use their policies anytime within 770 days of the date of purchase date, and offers a 15-day

"free" look option that allows consumers to review their travel insurance policy and cancel it for a full refund "if it doesn't meet their needs," Durazo said.

Under Chubb's travel insurance policies, COVID-19 is considered a "sickness," making it potentially eligible for coverage in accordance with policy provision, said James Walloga, executive vice president of Chubb Accident and Health.

"One example is if an insured contracts the virus and can't travel. Then their nonrefundable travel costs could be eligible for trip cancellation and/or trip interruption benefits," he said.

The global health pandemic is raising awareness about the need for travel insurance, Allianz's Durazo said. Nearly one-quarter of Americans with future travel plans said they will "definitely" buy travel insurance and 21% said they may purchase a policy, according to results of a ValuePenguin survey released in June.

A Crucial Point of Reference

Best's Credit Ratings are an assessment of an insurer's financial strength, creditworthiness and ability to honor obligations to policyholders. Backed by 120 years of focused experience, our ratings, analysis and commentary help financial professionals and consumers make informed decisions.

Get the best perspective on financial strength.

A Best's Credit Rating is a forward-looking, independent opinion regarding an insurer's, issuer's or financial obligation's relative creditworthiness. For limitations and disclosures regarding Best's Credit Ratings, please visit www.ambest.com/ratings/notice.asp.

A BEST

Expect big things in workers' compensation. Most classes approved, nationwide. It pays to get a quote from Applied.® For information call (877) 234-4450 or visit auw.com. Follow us at bigdoghq.com.
