The BCAR Model – Universal provides access to the same model used by AM Best to calculate the BCAR score for single and group insurance companies in the life and non-life sectors. Users can assess the impact of various scenarios, using different stress parameters and confidence levels, just as an AM Best analyst would, for internal modelling, planning, competitive comparisons and business development.

Best’s Capital Adequacy Ratio (BCAR) is an integrated review of an insurer’s underwriting, financial performance, and asset leverage. Best’s Capital Adequacy Ratio Model – Universal allows users to:

- Utilise the actual model used by AM Best’s rating analysts.
- Run BCAR scores on any company using your own assumptions.
- Run assessments for life and non-life insurers.
- Enter data via the easy-to-use Data Input screen.
- Link the Data Input screen to your existing data sources.
- Assess the impact on the BCAR score due to changes in reinsurance programs, asset valuations, business line diversification, losses, and asset allocation within a group.

Your purchase includes:

- An Excel®-based tool to make assumptions or adjustments to Available Capital and Net Required Capital for your company or others.
- Updates—any changes to the BCAR calculation or methodology will be provided.
- Review results under different parameters: Standard, CatStress, Terror.
- Calculate results under different confidence levels (VaR Value at Risk): VaR 95.0, VaR 99.0, VaR 99.5, VaR 99.6, VaR 99.8.
- Use the interactive Summary Report (shown above) to change parameters on the fly and generate insightful and revealing reports.
